SHAKEDOWN / MAVERICK BIRTHDAY EDITION

# GOLDEN DOME DASH

## THE COMPLETE VISUAL + AUDIO LM ARENA PRODUCTION CONTRACT

| | |
|---|---|
| 01 CAMPUS QUAD | 02 PLAYABLE GOLDEN DOME |
| 03 FOX ENCOUNTER | 04 BIRTHDAY FINALE |

220 individually specified visual records. 26 source-verified Cinnamon frames.

194 candidate visual outputs still require creation, approval, normalization and browser integration.

Full prompts independently executable, and each names its own asset, path, exact dimensions, source reference, visual rules, pivots and rejection criteria.

The Fox has NO approved standalone turnaround; his candidate must be reviewed before promotion.

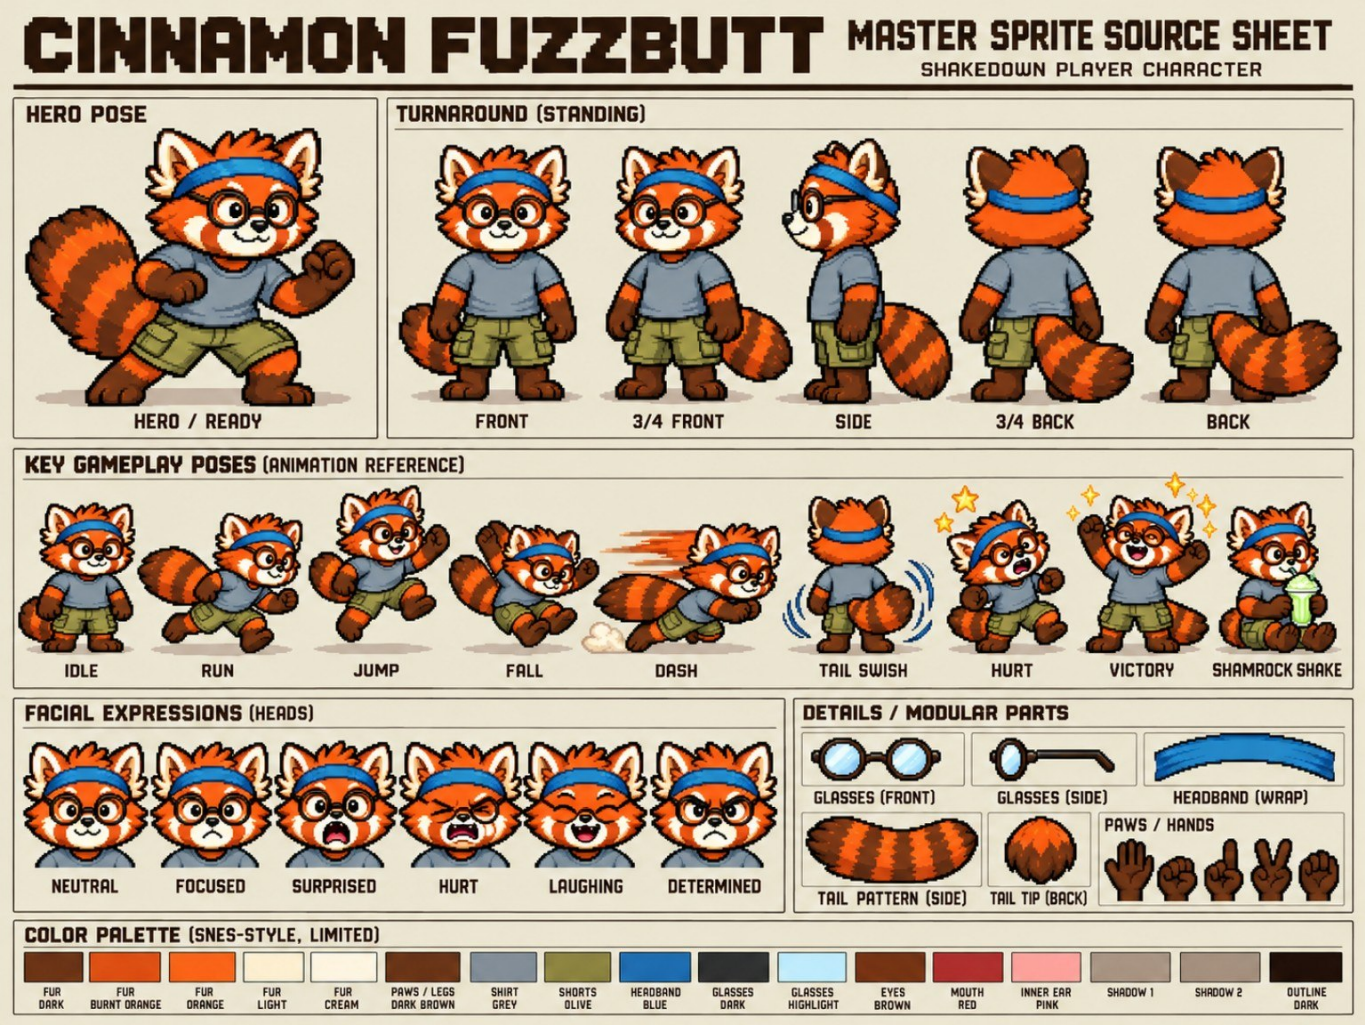

### SOURCE AUTHORITY

Project: github.com/westkitty/ShakeDown • Canon: two uploaded Cinnamon sprite sheets on next pages • Runtime: Canvas 2D / 960 × 540 logical pixels / 32px tile grid.

THIS DOCUMENT DOES NOT CLAIM that requested art or sound was generated. A production specification is not a verified asset.

# CINNAMON — MASTER STYLE / TURNAROUND

This supplied image establishes silhouette, colors, glasses, headband, shirt, shorts and striped tail, with action and expression exemplars. NOT an image to regenerate.

SOURCE FILE: assets/references/cinnamon_master_sheet.png • original pixels 1536 × 1152 • user-supplied reference authority, not an AI-generated deliverable.

# CINNAMON — ACTION SOURCE / REAL SPRITES

This supplied action source contains pixel data that was actually cropped and registered into 26 existing isolated Cinnamon frames. NOT a newly approved generation output.

SOURCE FILE: assets/references/cinnamon_actions_sheet.png • original pixels 1448 × 1086 • user-supplied reference authority, not an AI-generated deliverable.

# IMPLEMENTATION AND PRODUCTION CONTRACT

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

Cinnamon reference is compulsory for style/proportion/identity; any requested new Cinnamon sprite must match the 26 physically cut frames, same one ringed tail, one head, round glasses, blue headband, gray shirt and olive cargo shorts. Preserve foot-line and silhouette; no random accessories, missing glasses, new markings or costume drift. User-provided source is the visual canon; do not improvise a different red panda.

Fox appearance is a PROVISIONAL generation candidate, not accepted canon. Distinguish unmistakably from Cinnamon: fox not red panda, slender angular pointed muzzle, tall triangular ears, single long tail with white tip, no glasses, no headband, no ringed red-panda tail. Candidate palette bright russet/cream with a small deep-purple scarf. Before final integration, present the full Fox turnaround for user's signoff; subsequent states must derive from that accepted sheet; until approved, runtime procedural Fox art stays explicitly provisional.

Canvas engine: 960x540 logical screen, 32px tile contacts, source game inputs via canvas, DOM UI separate; source PNG frames are independent files, not grids or multi-panel mockups. No artwork defines collision by its alpha alone: developer controls solid tiles, one-way platforms, hazard rectangles, ground anchors and pickups separately. The generator supplies visual art only; the integrator must resize/crop to exact requested target pixel dimensions, verify real transparency, palette, edge seams, and origin metadata, and then register the output into a verified asset manifest before runtime use. A source photograph/turnaround/PDF page is NOT an integrated runtime sprite.

## GAMEPLAY ORDER / SCOPE

**INTRO** — Initial theft vignette, x=0 to 700. Player begins on the South Bend campus lawn.

**CAMPUS** — Campus movement and blue/gold pep rally quad, approximately x=700 to 3770.

**QUAD** — The quad gameplay half: steps, drum triggers, patrols, retracting bridge, and checkpoints.

**DOME** — The playable Golden Dome second half, approximately x=3770 to 8350; ascending cornices, lifts, roof ribs, checkpoints and skyline.

**BOSS** — Summit arena at the end of the Dome route; three clear hits and staged charge / volley / recovery tells.

**FINALE** — After boss victory the runtime renders a cake, Shamrock Shakes, celebration and editable HAPPY BIRTHDAY, MAVERICK! text.

**ALL** — Shared UI, character, effects, pickups, and worldwide environment components.

## INDIVIDUAL ASSET GENERATION, NOT PICTURE COLLAGES

First protect the 26 Cinnamon frames already on main. They are source-derived runtime files, not candidate new LM Arena outputs.

P0 core first. Fox turnaround must be signed off before dependent fox source frames are considered accepted. Additional P1 and P2 art is polish, never a blocker for the playable birthday game.

Submit each independent asset prompt separately as one image output. Only expressly specified model sheet or intentional source atlas may have multiple views in ONE canvas.

A model cannot guarantee 32px or 64px precise output; deliver high-resolution generation source, then resize/trim, verify native alpha and original dimensions, register hash in actual manifest, and inspect in game.

Gameplay hazards rely on animation state machines and coded rectangles; no generated pixels magically define collisions or moving platforms.

The final birthday display must spell HAPPY BIRTHDAY, MAVERICK! using actual accessible HTML/canvas text, not image-model lettering.

# COVERAGE MATRIX / VERIFIED VS REQUESTED

| Asset family | All | Existing | Generate | P0 | P1 | P2 |
|---|---|---|---|---|---|---|
| BIRTHDAY REVEAL / CAKE / SHAKES | 14 | 0 | 14 | 6 | 7 | 1 |
| CAMPUS BACKGROUNDS / QUAD | 6 | 0 | 6 | 3 | 3 | 0 |
| BOSS ATTACK READABILITY | 12 | 0 | 12 | 7 | 4 | 1 |
| CINNAMON SOURCE SPRITES / REFINEMENTS | 33 | 26 | 7 | 1 | 6 | 0 |
| COLLECTIBLES | 4 | 0 | 4 | 3 | 1 | 0 |
| DOME PARALLAX / VIEWPORTS | 8 | 0 | 8 | 3 | 3 | 2 |
| DOME MECHANICS | 10 | 0 | 10 | 7 | 3 | 0 |
| DOME ARCHITECTURE / PROPS | 10 | 0 | 10 | 3 | 5 | 2 |
| DOME STONE / GOLDEN TILES | 16 | 0 | 16 | 6 | 9 | 1 |
| CAMPUS ENEMY STATES | 7 | 0 | 7 | 4 | 3 | 0 |
| ADDITIONAL EFFECTS | 8 | 0 | 8 | 0 | 5 | 3 |
| THE FOX / INTRO AND BOSS | 16 | 0 | 16 | 9 | 5 | 2 |
| TRANSITIONS / STORY EFFECTS | 4 | 0 | 4 | 2 | 2 | 0 |
| CAMPUS PULSE OBJECTS | 9 | 0 | 9 | 8 | 1 | 0 |
| COLLECTIBLES / POWERUPS / PICKUP FRAMES | 6 | 0 | 6 | 0 | 4 | 2 |
| CAMPUS PROPS / LANDMARKS | 14 | 0 | 14 | 6 | 8 | 0 |
| CAMPUS TERRAIN / COLLISION TILES | 10 | 0 | 10 | 6 | 4 | 0 |
| BASE INTERFACE | 9 | 0 | 9 | 0 | 9 | 0 |
| ADDITIONAL UI / TOUCH | 14 | 0 | 14 | 1 | 10 | 3 |
| CAMPUS VISUAL EFFECTS | 10 | 0 | 10 | 1 | 9 | 0 |

TOTAL 220 visual IDs; 26 existing actual verified; 194 requests not yet generated; 0 new generated final art verified; 0 pending integration files. This is complete SPECIFICATION coverage, NOT completed final art coverage.

Workflow: specification → approved visual reference → generate individual raw output → accept and normalize source → test dimensions/alpha/pivot → register SHA256 and logical ID → actual browser render plus interaction → approved and integrated.

# CIN / CINNAMON SOURCE SPRITES / REFINEMENTS

33 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## CIN-N06 / Final birthday cheers

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 480 × 320 | TARGET 240 × 160 | RGBA

PATH: assets/production/cinnamon/birthday_celebrate.png | ZONE: finale | PIVOT: face=(145,147 feet) | COLLIDER: player physics stays 38x60, art-only extension | ANIM: one PNG frame; do not pack with adjacent frames

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET CIN-N06: Final birthday cheers.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for Finale choreography. Where it appears: finale. Subject/design: Standing arms raised, open grin, excited eyes, unchanged blue headband/shirt/shorts. NO cake or extra props on sprite.

Cinnamon reference is compulsory for style/proportion/identity; any requested new Cinnamon sprite must match the 26 physically cut frames, same one ringed tail, one head, round glasses, blue headband, gray shirt and olive cargo shorts. Preserve foot-line and silhouette; no random accessories, missing glasses, new markings or costume drift. User-provided source is the visual canon; do not improvise a different red panda.

RENDER AND EXPORT CONTRACT: source artwork composition 480 x 320 pixels, 1.500:1 aspect; exact cleaned game-ready PNG target 240 x 160 pixels, 1.500:1 aspect. Name output file exactly assets/production/cinnamon/birthday_celebrate.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: face=(145,147 feet); collision declaration: player physics stays 38x60, art-only extension; animation-state contract: one PNG frame; do not pack with adjacent frames. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: All 26 verified Cinnamon cutouts + source sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Final birthday cheers state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/cinnamon/birthday_celebrate.png; measure intrinsic 240x160 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID CIN-N06 in runtime manifest. At runtime map ID to Finale choreography; place in finale with anchor face=(145,147 feet); use the engine auth collider "player physics stays 38x60, art-only extension" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Final birthday cheers state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** Verify file bytes exist at assets/production/cinnamon/birthday_celebrate.png; measure intrinsic 240x160 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID CIN-N06 in runtime manifest. At runtime map ID to Finale choreography; place in finale with anchor face=(145,147 feet); use the engine auth collider "player physics stays 38x60, art-only extension" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## CIN-N01 / Landing recovery neutral

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 480 × 320 | TARGET 240 × 160 | RGBA

PATH: assets/production/cinnamon/land_recover.png | ZONE: dome | PIVOT: face=(145,147 feet) | COLLIDER: player physics stays 38x60, art-only extension | ANIM: one PNG frame; do not pack with adjacent frames

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET CIN-N01: Landing recovery neutral.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for Player game-feel recovery. Where it appears: dome. Subject/design: Two consecutive settle poses: front foot planted, ears bouncing, black glasses level; separately output a landing settle frame.

Cinnamon reference is compulsory for style/proportion/identity; any requested new Cinnamon sprite must match the 26 physically cut frames, same one ringed tail, one head, round glasses, blue headband, gray shirt and olive cargo shorts. Preserve foot-line and silhouette; no random accessories, missing glasses, new markings or costume drift. User-provided source is the visual canon; do not improvise a different red panda.

RENDER AND EXPORT CONTRACT: source artwork composition 480 x 320 pixels, 1.500:1 aspect; exact cleaned game-ready PNG target 240 x 160 pixels, 1.500:1 aspect. Name output file exactly assets/production/cinnamon/land_recover.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: face=(145,147 feet); collision declaration: player physics stays 38x60, art-only extension; animation-state contract: one PNG frame; do not pack with adjacent frames. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. ## CIN-N02 / Climb contact left

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 480 × 320 | TARGET 240 × 160 | RGBA

PATH: assets/production/cinnamon/climb_hold.png | ZONE: dome | PIVOT: face=(145,147 feet) | COLLIDER: player physics stays 38x60, art-only extension | ANIM: one PNG frame; do not pack with adjacent frames

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET CIN-N02: Climb contact left.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for Dome ledge hold. Where it appears: dome. Subject/design: Hanging from architectural stone ledge, paws visibly hooked on lip; single ringed tail droops; blue headband never moves.

Cinnamon reference is compulsory for style/proportion/identity; any requested new Cinnamon sprite must match the 26 physically cut frames, same one ringed tail, one head, round glasses, blue headband, gray shirt and olive cargo shorts. Preserve foot-line and silhouette; no random accessories, missing glasses, new markings or costume drift. User-provided source is the visual canon; do not improvise a different red panda.

RENDER AND EXPORT CONTRACT: source artwork composition 480 x 320 pixels, 1.500:1 aspect; exact cleaned game-ready PNG target 240 x 160 pixels, 1.500:1 aspect. Name output file exactly assets/production/cinnamon/climb_hold.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: face=(145,147 feet); collision declaration: player physics stays 38x60, art-only extension; animation-state contract: one PNG frame; do not pack with adjacent frames. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. ## CIN-N03 / Climb mantle

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 480 × 320 | TARGET 240 × 160 | RGBA

PATH: assets/production/cinnamon/climb_mantle.png | ZONE: dome | PIVOT: face=(145,147 feet) | COLLIDER: player physics stays 38x60, art-only extension | ANIM: one PNG frame; do not pack with adjacent frames

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET CIN-N03: Climb mantle.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for Dome ledge pull-up. Where it appears: dome. Subject/design: Cinnamon pushes from a hanging ledge to an upright landing with weight on front paw, side-view.

Cinnamon reference is compulsory for style/proportion/identity; any requested new Cinnamon sprite must match the 26 physically cut frames, same one ringed tail, one head, round glasses, blue headband, gray shirt and olive cargo shorts. Preserve foot-line and silhouette; no random

accessories, missing glasses, new markings or costume drift. User-provided source is the visual canon; do not improvise a different red panda.

RENDER AND EXPORT CONTRACT: source artwork composition 480 x 320 pixels, 1.500:1 aspect; exact cleaned game-ready PNG target 240 x 160 pixels, 1.500:1 aspect. Name output file exactly assets/production/cinnamon/climb_mantle.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: face=(145,147 feet); collision declaration: player physics stays 38x60, art-only extension; animation-state contract: one PNG frame; do not pack with adjacent frames. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: All 26 verified Cinnamon cutouts + source sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Climb mantle state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/cinnamon/climb_mantle.png; measure intrinsic 240x160 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID CIN-N03 in runtime manifest. At runtime map ID to Dome ledge pull-up; place in dome with anchor face=(145,147 feet); use the engine auth collider "player physics stays 38x60, art-only extension" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Climb mantle state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** Verify file bytes exist at assets/production/cinnamon/climb_mantle.png; measure intrinsic 240x160 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID CIN-N03 in runtime manifest. At runtime map ID to Dome ledge pull-up; place in dome with anchor face=(145,147 feet); use the engine auth collider "player physics stays 38x60, art-only extension" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## CIN-N04 / Shake pickup celebration

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 480 × 320 | TARGET 240 × 160 | RGBA

PATH: assets/production/cinnamon/pickup.png | ZONE: dome | PIVOT: face=(145,147 feet) | COLLIDER: player physics stays 38x60, art-only extension | ANIM: one PNG frame; do not pack with adjacent frames

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET CIN-N04: Shake pickup celebration.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph,

generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for Pickup reaction. Where it appears: dome. Subject/design: Quick one-hand celebratory lift with green paper cup held independent for in-engine compositing; NO drink painted into character pixels.

Cinnamon reference is compulsory for style/proportion/identity; any requested new Cinnamon sprite must match the 26 physically cut frames, same one ringed tail, one head, round glasses, blue headband, gray shirt and olive cargo shorts. Preserve foot-line and silhouette; no random accessories, missing glasses, new markings or costume drift. User-provided source is the visual canon; do not improvise a different red panda.

RENDER AND EXPORT CONTRACT: source artwork composition 480 x 320 pixels, 1.500:1 aspect; exact cleaned game-ready PNG target 240 x 160 pixels, 1.500:1 aspect. Name output file exactly assets/production/cinnamon/pickup.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: face=(145,147 feet); collision declaration: player physics stays 38x60, art-only extension; animation-state contract: one PNG frame; do not pack with adjacent frames. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: All 26 verified Cinnamon cutouts + source sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Shake pickup celebration state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/cinnamon/pickup.png; measure intrinsic 240x160 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID CIN-N04 in runtime manifest. At runtime map ID to Pickup reaction; place in dome with anchor face=(145,147 feet); use the engine auth collider "player physics stays 38x60, art-only extension" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Shake pickup celebration state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** Verify file bytes exist at assets/production/cinnamon/pickup.png; measure intrinsic 240x160 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID CIN-N04 in runtime manifest. INTEGRATION DEPENDENCIES: Uploaded action reference + verified deterministic cut-out. Required priority EXISTING (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Cinnamon approved-source cut-out — dash_01 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/dash_01.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Cinnamon approved-source cut-out — dash_01 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/dash_01.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

## CIN-EX-02 / Cinnamon approved-source cut-out — fall_00

PRIORITY EXISTING | STATUS VERIFIED_IN_REPO_LOCAL_BROWSER | SOURCE 1448 × 1086 | TARGET 240 × 160 | RGBA

PATH: assets/sprites/cinnamon/fall_00.png | ZONE: all | PIVOT: face=(145,147 feet) on a 240x160 canvas | COLLIDER: none (player body AABB 38x60 authored separately) | ANIM: single frame fall_00, selected at runtime according to action/state

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET CIN-EX-02: Cinnamon approved-source cut-out — fall_00.

EXISTING VERIFIED FILE: do not regenerate this Cinnamon frame as a new deliverable. This specification is for audit / repair ONLY. Keep the original existing source as the default; revise only if an integrator reports a concrete defect.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for Runtime player animation. Where it appears: all. Subject/design: Preserve the exact fall_00 pose and face/tail/clothing details in the supplied source reference. This record identifies an EXISTING source-derived PNG; do not produce a substitute unless the integrator explicitly rejects it. If rejected, revise against the full model sheet retaining the pose, silhouette and expression at the given 240x160 playback frame.

Cinnamon reference is compulsory for style/proportion/identity; any requested new Cinnamon sprite must match the 26 physically cut frames, same one ringed tail, one head, round glasses, blue headband, gray shirt and olive cargo shorts. Preserve foot-line and silhouette; no random accessories, missing glasses, new markings or costume drift. User-provided source is the visual canon; do not improvise a different red panda.

RENDER AND EXPORT CONTRACT: source artwork composition 1448 x 1086 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 240 x 160 pixels, 1.500:1 aspect. Name output file exactly assets/sprites/cinnamon/fall_00.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: face=(145,147 feet) on a 240x160 canvas; collision declaration: none (player body AABB 38x60 authored separately); animation-state contract: single frame fall_00, selected at runtime according to action/state. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Uploaded action reference + verified deterministic cut-out. Required priority EXISTING (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Cinnamon approved-source cut-out — fall_00 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/fall_00.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Cinnamon approved-source cut-out — fall_00 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/fall_00.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains

independent.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/idle_01.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Cinnamon approved-source cut-out — idle_01 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/idle_01.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

## CIN-EX-07 / Cinnamon approved-source cut-out — idle_02

PRIORITY EXISTING | STATUS VERIFIED_IN_REPO_LOCAL_BROWSER | SOURCE 1448 × 1086 | TARGET 240 × 160 | RGBA

PATH: assets/sprites/cinnamon/idle_02.png | ZONE: all | PIVOT: face=(145,147 feet) on a 240x160 canvas | COLLIDER: none (player body AABB 38x60 authored separately) | ANIM: single frame idle_02, selected at runtime according to action/state

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET CIN-EX-07: Cinnamon approved-source cut-out — idle_02.

EXISTING VERIFIED FILE: do not regenerate this Cinnamon frame as a new deliverable. This specification is for audit / repair ONLY. Keep the original existing source as the default; revise only if an integrator reports a concrete defect.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for Runtime player animation. Where it appears: all. Subject/design: Preserve the exact idle_02 pose and face/tail/clothing details in the supplied source reference. This record identifies an EXISTING source-derived PNG; do not produce a substitute unless the integrator explicitly rejects it. If rejected, revise against the full model sheet retaining the pose, silhouette and expression at the given 240x160 playback frame.

Cinnamon reference is compulsory for style/proportion/identity; any requested new Cinnamon sprite must match the 26 physically cut frames, same one ringed tail, one head, round glasses, blue headband, gray shirt and olive cargo shorts. Preserve foot-line and silhouette; no random accessories, missing glasses, new markings or costume drift. User-provided source is the visual canon; do not improvise a different red panda.

RENDER AND EXPORT CONTRACT: source artwork composition 1448 x 1086 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 240 x 160 pixels, 1.500:1 aspect. Name output file exactly assets/sprites/cinnamon/idle_02.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: face=(145,147 feet) on a 240x160 canvas; collision declaration: none (player body AABB 38x60 authored separately); animation-state contract: single frame idle_02, selected at runtime according to action/state. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Uploaded action reference + verified deterministic cut-out. Required priority EXISTING (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Cinnamon approved-source cut-out — idle_02 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/idle_02.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Existing file assets/sprites/cinnamon/jump_00.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Cinnamon approved-source cut-out — jump_00 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/jump_00.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

## CIN-EX-12 / Cinnamon approved-source cut-out — jump_01

PRIORITY EXISTING | STATUS VERIFIED_IN_REPO_LOCAL_BROWSER | SOURCE 1448 × 1086 | TARGET 240 × 160 | RGBA

PATH: assets/sprites/cinnamon/jump_01.png | ZONE: all | PIVOT: face=(145,147 feet) on a 240x160 canvas | COLLIDER: none (player body AABB 38x60 authored separately) | ANIM: single frame jump_01, selected at runtime according to action/state

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET CIN-EX-12: Cinnamon approved-source cut-out — jump_01.

EXISTING VERIFIED FILE: do not regenerate this Cinnamon frame as a new deliverable. This specification is for audit / repair ONLY. Keep the original existing source as the default; revise only if an integrator reports a concrete defect.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for Runtime player animation. Where it appears: all. Subject/design: Preserve the exact jump_01 pose and face/tail/clothing details in the supplied source reference. This record identifies an EXISTING source-derived PNG; do not produce a substitute unless the integrator explicitly rejects it. If rejected, revise against the full model sheet retaining the pose, silhouette and expression at the given 240x160 playback frame.

Cinnamon reference is compulsory for style/proportion/identity; any requested new Cinnamon sprite must match the 26 physically cut frames, same one ringed tail, one head, round glasses, blue headband, gray shirt and olive cargo shorts. Preserve foot-line and silhouette; no random accessories, missing glasses, new markings or costume drift. User-provided source is the visual canon; do not improvise a different red panda.

RENDER AND EXPORT CONTRACT: source artwork composition 1448 x 1086 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 240 x 160 pixels, 1.500:1 aspect. Name output file exactly assets/sprites/cinnamon/jump_01.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: face=(145,147 feet) on a 240x160 canvas; collision declaration: none (player body AABB 38x60 authored separately); animation-state contract: single frame jump_01, selected at runtime according to action/state. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Uploaded action reference + verified deterministic cut-out. Required priority EXISTING (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Cinnamon approved-source cut-out — jump_01 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/jump_01.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Cinnamon approved-source cut-out — jump_01 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/jump_01.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

## CIN-EX-17 / Cinnamon approved-source cut-out — run_03

PRIORITY EXISTING | STATUS VERIFIED_IN_REPO_LOCAL_BROWSER | SOURCE 1448 × 1086 | TARGET 240 × 160 | RGBA

PATH: assets/sprites/cinnamon/run_03.png | ZONE: all | PIVOT: face=(145,147 feet) on a 240x160 canvas | COLLIDER: none (player body AABB 38x60 authored separately) | ANIM: single frame run_03, selected at runtime according to action/state

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET CIN-EX-17: Cinnamon approved-source cut-out — run_03.

EXISTING VERIFIED FILE: do not regenerate this Cinnamon frame as a new deliverable. This specification is for audit / repair ONLY. Keep the original existing source as the default; revise only if an integrator reports a concrete defect.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for Runtime player animation. Where it appears: all. Subject/design: Preserve the exact run_03 pose and face/tail/clothing details in the supplied source reference. This record identifies an EXISTING source-derived PNG; do not produce a substitute unless the integrator explicitly rejects it. If rejected, revise against the full model sheet retaining the pose, silhouette and expression at the given 240x160 playback frame.

Cinnamon reference is compulsory for style/proportion/identity; any requested new Cinnamon sprite must match the 26 physically cut frames, same one ringed tail, one head, round glasses, blue headband, gray shirt and olive cargo shorts. Preserve foot-line and silhouette; no random accessories, missing glasses, new markings or costume drift. User-provided source is the visual canon; do not improvise a different red panda.

RENDER AND EXPORT CONTRACT: source artwork composition 1448 x 1086 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 240 x 160 pixels, 1.500:1 aspect. Name output file exactly assets/sprites/cinnamon/run_03.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: face=(145,147 feet) on a 240x160 canvas; collision declaration: none (player body AABB 38x60 authored separately); animation-state contract: single frame run_03, selected at runtime according to action/state. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Uploaded action reference + verified deterministic cut-out. Required priority EXISTING (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Cinnamon approved-source cut-out — run_03 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/run_03.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Cinnamon approved-source cut-out — run_03 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/run_03.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Cinnamon approved-source cut-out — swish_00 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/swish_00.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

---

## CIN-EX-22 / Cinnamon approved-source cut-out — swish_01

PRIORITY EXISTING | STATUS VERIFIED_IN_REPO_LOCAL_BROWSER | SOURCE 1448 × 1086 | TARGET 240 × 160 | RGBA

PATH: assets/sprites/cinnamon/swish_01.png | ZONE: all | PIVOT: face=(145,147 feet) on a 240x160 canvas | COLLIDER: none (player body AABB 38x60 authored separately) | ANIM: single frame swish_01, selected at runtime according to action/state

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET CIN-EX-22: Cinnamon approved-source cut-out — swish_01.

EXISTING VERIFIED FILE: do not regenerate this Cinnamon frame as a new deliverable. This specification is for audit / repair ONLY. Keep the original existing source as the default; revise only if an integrator reports a concrete defect.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for Runtime player animation. Where it appears: all. Subject/design: Preserve the exact swish_01 pose and face/tail/clothing details in the supplied source reference. This record identifies an EXISTING source-derived PNG; do not produce a substitute unless the integrator explicitly rejects it. If rejected, revise against the full model sheet retaining the pose, silhouette and expression at the given 240x160 playback frame.

Cinnamon reference is compulsory for style/proportion/identity; any requested new Cinnamon sprite must match the 26 physically cut frames, same one ringed tail, one head, round glasses, blue headband, gray shirt and olive cargo shorts. Preserve foot-line and silhouette; no random accessories, missing glasses, new markings or costume drift. User-provided source is the visual canon; do not improvise a different red panda.

RENDER AND EXPORT CONTRACT: source artwork composition 1448 x 1086 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 240 x 160 pixels, 1.500:1 aspect. Name output file exactly assets/sprites/cinnamon/swish_01.png. Deliver one individual image file, not a collage

or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: face=(145,147 feet) on a 240x160 canvas; collision declaration: none (player body AABB 38x60 authored separately); animation-state contract: single frame swish_01, selected at runtime according to action/state. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Uploaded action reference + verified deterministic cut-out. Required priority EXISTING (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Cinnamon approved-source cut-out — swish_01 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/swish_01.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Cinnamon approved-source cut-out — swish_01 state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** ALREADY VERIFIED IN REPOSITORY. Existing file assets/sprites/cinnamon/swish_01.png has SHA256 captured from source extraction in frames.json and is used in Canvas 2D runtime animation. Preserve; replace only after diff and regression visual proof. Physics AABB remains independent.

# FOX / THE FOX / INTRO AND BOSS

16 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## FOX-01 / Fox identity approval turnaround

PRIORITY P0 | STATUS PROVISIONAL_MISSING_APPROVAL | SOURCE 1536 × 1152 | TARGET 1024 × 768 | RGB

PATH: assets/production/fox/fox_01.png | ZONE: intro,boss | PIVOT: center | COLLIDER: none | ANIM: model-sheet only

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET FOX-01: Fox identity approval turnaround.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for model sheet. Where it appears: intro,boss. Subject/design: Narrow true fox with a single long pointed white-tip tail, large upright triangular ears, orange/cream muzzle, sharp snout, mischievous eyebrow, purple scarf; absolutely NO red-panda markings, glasses or headband. Side view plus matching neutral front and three-quarter views allowed ONLY in this intentionally unified model sheet.

Fox appearance is a PROVISIONAL generation candidate, not accepted canon. Distinguish unmistakably from Cinnamon: fox not red panda, slender angular pointed muzzle, tall triangular ears, single long tail with white tip, no glasses, no headband, no ringed red-panda tail. Candidate palette bright russet/cream with a small deep-purple scarf. Before final integration, present the full Fox turnaround for user's signoff; subsequent states must derive from that accepted sheet; until approved, runtime procedural Fox art stays explicitly provisional.

RENDER AND EXPORT CONTRACT: source artwork composition 1536 x 1152 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 1024 x 768 pixels, 1.333:1 aspect. Name output file exactly assets/production/fox/fox_01.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: none; animation-state contract: model-sheet only. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: opaque RGB, full bleed, no fake transparent grid; seamless clear edges with no border. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: FOX-01 approved reference needed before final PROMOTED status. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Fox identity approval turnaround state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/fox/fox_01.png; measure intrinsic 1024x768 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID FOX-01 in runtime manifest. At runtime map ID to model sheet; place in

intro,boss with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Fox identity approval turnaround state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** Verify file bytes exist at assets/production/fox/fox_01.png; measure intrinsic 1024x768 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID FOX-01 in runtime manifest. At runtime map ID to model sheet; place in intro,boss with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## FOX-02 / Fox idle flank

PRIORITY P0 | STATUS PROVISIONAL_MISSING_APPROVAL | SOURCE 480 × 480 | TARGET 240 × 240 | RGBA

PATH: assets/production/fox/fox_02.png | ZONE: intro,boss | PIVOT: (120,215) | COLLIDER: none | ANIM: single action state/frame, not a sheet; boss 3 hits, 2 telegraphed attack families

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET FOX-02: Fox idle flank.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for boss idle. Where it appears: intro,boss. Subject/design: Fox faces camera-left with narrow sneer and smug visible gaze; isolated full body, white-tip tail offset behind.

Fox appearance is a PROVISIONAL generation candidate, not accepted canon. Distinguish unmistakably from Cinnamon: fox not red panda, slender angular pointed muzzle, tall triangular ears, single long tail with white tip, no glasses, no headband, no ringed red-panda tail. Candidate palette bright russet/cream with a small deep-purple scarf. Before final integration, present the full Fox turnaround for user's signoff; subsequent states must derive from that accepted sheet; until approved, runtime procedural Fox art stays explicitly provisional.

RENDER AND EXPORT CONTRACT: source artwork composition 480 x 480 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 240 x 240 pixels, 1.000:1 aspect. Name output file exactly assets/production/fox/fox_02.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: (120,215); collision declaration: none; animation-state contract: single action state/frame, not a sheet; boss 3 hits, 2 telegraphed attack families. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: FOX-01 approved reference needed before final PROMOTED status. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Fox idle flank state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/fox/fox_02.png; measure intrinsic 240x240 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID FOX-02 in runtime manifest. At runtime map ID to boss idle; place in intro,boss with anchor (120,215); use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Fox idle flank state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** Verify file bytes exist at assets/production/fox/fox_02.png; measure intrinsic 240x240 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID FOX-02 in runtime manifest. At runtime map ID to boss idle; place in intro,boss with anchor (120,215); use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## FOX-09 / Fox stun frame A

PRIORITY P0 | STATUS PROVISIONAL_MISSING_APPROVAL | SOURCE 480 × 480 | TARGET 240 × 240 | RGBA

PATH: assets/production/fox/fox_09.png | ZONE: intro,boss | PIVOT: (120,215) | COLLIDER: none | ANIM: single action state/frame, not a sheet; boss 3 hits, 2 telegraphed attack families

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET FOX-09: Fox stun frame A.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for boss rest vulnerability. Where it appears: intro,boss. Subject/design: Fox dizzy stagger after missed attack; squashed posture with eyebrows lifted, scarf droops.

Fox appearance is a PROVISIONAL generation candidate, not accepted canon. Distinguish unmistakably from Cinnamon: fox not red panda, slender angular pointed muzzle, tall triangular ears, single long tail with white tip, no glasses, no headband, no ringed red-panda tail. Candidate palette bright russet/cream with a small deep-purple scarf. Before final integration, present the full Fox turnaround for user's signoff; subsequent states must derive from that accepted sheet; until approved, runtime procedural Fox art stays explicitly provisional.

RENDER AND EXPORT CONTRACT: source artwork composition 480 x 480 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 240 x 240 pixels, 1.000:1 aspect. Name output file exactly assets/production/fox/fox_09.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: (120,215); collision declaration: none; animation-state contract: single action state/frame, not a sheet; boss 3 hits, 2 telegraphed attack families. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: FOX-01 approved reference needed before final PROMOTED status. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Fox stun frame A state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/fox/fox_09.png; measure intrinsic 240x240 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID FOX-09 in runtime manifest. At runtime map ID to boss rest vulnerability; place in intro,boss with anchor (120,215); use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Fox stun frame A state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** Verify file bytes exist at assets/production/fox/fox_09.png; measure intrinsic 240x240 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID FOX-09 in runtime manifest. At runtime map ID to boss rest vulnerability; place in intro,boss with anchor (120,215); use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE character art output for boss rest vulnerability. Where it appears: intro,boss. Subject/design: Second stagger pose with paws spread, ears skewed, white tip tail visible.

Fox appearance is a PROVISIONAL generation candidate, not accepted canon. Distinguish unmistakably from Cinnamon: fox not red panda, slender angular pointed muzzle, tall triangular ears, single long tail with white tip, no glasses, no headband, no ringed red-panda tail. Candidate palette bright russet/cream with a small deep-purple scarf. Before final integration, present the full Fox turnaround for user's signoff; subsequent states must derive from that accepted sheet; until approved, runtime procedural Fox art stays explicitly provisional.

RENDER AND EXPORT CONTRACT: source artwork composition 480 x 480 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 240 x 240 pixels, 1.000:1 aspect. Name output file exactly assets/production/fox/fox_10.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: (120,215); collision declaration: none; animation-state contract: single action state/frame, not a sheet; boss 3 hits, 2 telegraphed attack families. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: FOX-01 approved reference needed before final PROMOTED status. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Fox stun frame B state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/fox/fox_10.png; measure intrinsic 240x240 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID FOX-10 in runtime manifest. At runtime map ID to boss rest vulnerability; place in intro,boss with anchor (120,215); use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas

fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Fox stun frame B state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** Verify file bytes exist at assets/production/fox/fox_10.png; measure intrinsic 240x240 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID FOX-10 in runtime manifest. At runtime map ID to boss rest vulnerability; place in intro,boss with anchor (120,215); use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE background art output for Opaque far background; all outdoor zones. Where it appears: all. Subject/design: Clean warm pale blue campus daylight sky; gentle white clouds only in upper third; no ground, no buildings, no playable objects.

RENDER AND EXPORT CONTRACT: source artwork composition 1920 x 1080 pixels, 1.778:1 aspect; exact cleaned game-ready PNG target 960 x 540 pixels, 1.778:1 aspect. Name output file exactly assets/level1/backgrounds/bg_01_daylight_sky.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: full-bleed 2D side-on orthographic parallax plane. Anchor / pivot: top-left; collision declaration: none; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: opaque RGB, full bleed, no fake transparent grid; seamless clear edges with no border. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Painted parallax composition fills exactly 960x540 final pixels without stretched subjects or foreground colliders; low-contrast traversable negative space leaves player and telegraphs readable, 16-bit palette consistent.

REJECT IF: Playable ledges or signs baked into a background; wrong landmark silhouette; photorealism; text; high-contrast clutter masking the player; missing intentional sky/open space.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/backgrounds/bg_01_daylight_sky.png; measure intrinsic 960x540 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BG-01 in runtime manifest. At runtime map ID to Opaque far background; all outdoor zones; place in all with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

DO NOT BAKE LIVE TEXT: all headings, counters, accessibility instructions, and birthday name are separate runtime DOM/canvas text layers with localization/layout flexibility. Allow the specified text-safe regions to remain clear.

**PASS:** Painted parallax composition fills exactly 960x540 final pixels without stretched subjects or foreground colliders; low-contrast traversable negative space leaves player and telegraphs readable, 16-bit palette consistent.

**REJECT:** Playable ledges or signs baked into a background; wrong landmark silhouette; photorealism; text; high-contrast clutter masking the player; missing intentional sky/open space.

**INTEGRATE:** Verify file bytes exist at assets/level1/backgrounds/bg_01_daylight_sky.png; measure intrinsic 960x540 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BG-01 in runtime manifest. At runtime map ID to Opaque far background; all outdoor zones; place in all with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## BG-03 / South Quad architecture

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 1920 × 1080 | TARGET 960 × 540 | RGBA

PATH: assets/level1/backgrounds/bg_03_south_quad_architecture.png | ZONE: all | PIVOT: top-left | COLLIDER: none | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET BG-03: South Quad architecture.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE background art output for Majority of quad route. Where it appears: all. Subject/design: Long collegiate brick and pale-stone facades, open windows, mild buttress and arch details, generous lawn; recognizable Notre Dame ambience without measured geography; no embedded jumpable stairs/platforms.

RENDER AND EXPORT CONTRACT: source artwork composition 1920 x 1080 pixels, 1.778:1 aspect; exact cleaned game-ready PNG target 960 x 540 pixels, 1.778:1 aspect. Name output file exactly assets/level1/backgrounds/bg_03_south_quad_architecture.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: full-bleed 2D side-on orthographic parallax plane. Anchor / pivot: top-left; collision declaration: none; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/backgrounds/bg_06_escape_horizon.png; measure intrinsic 960x540 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BG-06 in runtime manifest. At runtime map ID to Fox gets away after Dome; place in all with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

DO NOT BAKE LIVE TEXT: all headings, counters, accessibility instructions, and birthday name are separate runtime DOM/canvas text layers with localization/layout flexibility. Allow the specified text-safe regions to remain clear.

**PASS:** Painted parallax composition fills exactly 960x540 final pixels without stretched subjects or foreground colliders; low-contrast traversable negative space leaves player and telegraphs readable, 16-bit palette consistent.

**REJECT:** Playable ledges or signs baked into a background; wrong landmark silhouette; photorealism; text; high-contrast clutter masking the player; missing intentional sky/open space.

**INTEGRATE:** Verify file bytes exist at assets/level1/backgrounds/bg_06_escape_horizon.png; measure intrinsic 960x540 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BG-06 in runtime manifest. At runtime map ID to Fox gets away after Dome; place in all with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# TL / CAMPUS TERRAIN / COLLISION TILES

10 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## TL-01 / Grass top tile

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 128 × 128 | TARGET 32 × 32 | RGBA

PATH: assets/level1/tiles/tl_01_grass_top_tile.png | ZONE: all | PIVOT: tile-top-left | COLLIDER: tile authored AABB | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET TL-01: Grass top tile.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE tile art output for Modular level geometry. Where it appears: all. Subject/design: walkable 32 px grass strip with precise top edge, 5-7 px grassy cap over compact dark earth

RENDER AND EXPORT CONTRACT: source artwork composition 128 x 128 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 32 x 32 pixels, 1.000:1 aspect. Name output file exactly assets/level1/tiles/tl_01_grass_top_tile.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: tile-top-left; collision declaration: tile authored AABB; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

REJECT IF: Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/tiles/tl_01_grass_top_tile.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID TL-01 in runtime manifest. At runtime map ID to Modular level geometry; place in all with anchor tile-top-left; use the engine auth collider "tile authored AABB" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

TILE EDGE REQUIREMENT: art edges must meet exactly with adjacent tile copies; preserve a flat top lip where stated; one 32px world tile equals one authored grid cell, regardless of generation source resolution. No perspective shading that ruins the repeated flat gameplay plane.

**PASS:** Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

**REJECT:** Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

**INTEGRATE:** Verify file bytes exist at assets/level1/tiles/tl_01_grass_top_tile.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID TL-01 in runtime manifest. At runtime map ID to Modular level geometry; place in all with anchor tile-top-left; use the engine auth collider "tile authored AABB" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## TL-08 / Stone step tile

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 128 × 128 | TARGET 32 × 32 | RGBA

PATH: assets/level1/tiles/tl_08_stone_step_tile.png | ZONE: all | PIVOT: tile-top-left | COLLIDER: tile authored AABB | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET TL-08: Stone step tile.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE tile art output for Modular level geometry. Where it appears: all. Subject/design: pale stone stair-tread surface with clean 32 px read

RENDER AND EXPORT CONTRACT: source artwork composition 128 x 128 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 32 x 32 pixels, 1.000:1 aspect. Name output file exactly assets/level1/tiles/tl_08_stone_step_tile.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output,

supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: tile-top-left; collision declaration: tile authored AABB; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

REJECT IF: Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/tiles/tl_08_stone_step_tile.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID TL-08 in runtime manifest. At runtime map ID to Modular level geometry; place in all with anchor tile-top-left; use the engine auth collider "tile authored AABB" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

TILE EDGE REQUIREMENT: art edges must meet exactly with adjacent tile copies; preserve a flat top lip where stated; one 32px world tile equals one authored grid cell, regardless of generation source resolution. No perspective shading that ruins the repeated flat gameplay plane.

**PASS:** Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

**REJECT:** Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

**INTEGRATE:** Verify file bytes exist at assets/level1/tiles/tl_08_stone_step_tile.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID TL-08 in runtime manifest. At runtime map ID to Modular level geometry; place in all with anchor tile-top-left; use the engine auth collider "tile authored AABB" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## TL-06 / Stone ledge left cap

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 128 × 128 | TARGET 32 × 32 | RGBA

PATH: assets/level1/tiles/tl_06_stone_ledge_left_cap.png | ZONE: all | PIVOT: tile-top-left | COLLIDER: tile authored AABB | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET TL-06: Stone ledge left cap.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE tile art output for Modular level geometry. Where it appears: all. Subject/design: stone ledge left termination with readable edge and exact neighbor continuation on right

RENDER AND EXPORT CONTRACT: source artwork composition 128 x 128 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 32 x 32 pixels, 1.000:1 aspect. Name output file exactly assets/level1/tiles/tl_06_stone_ledge_left_cap.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

# PR / CAMPUS PROPS / LANDMARKS

14 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## PR-01 / Shamrock Shake stand

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 1024 × 768 | TARGET 256 × 192 | RGBA

PATH: assets/level1/props/pr_01_shamrock_shake_stand.png | ZONE: all | PIVOT: bottom-center | COLLIDER: specified per placement | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET PR-01: Shamrock Shake stand.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE prop art output for Opening theft kiosk. Where it appears: all. Subject/design: Cheerful small outdoor concession booth with green shamrock graphics, blue-and-gold awning accents and clear service counter; no readable text.

RENDER AND EXPORT CONTRACT: source artwork composition 1024 x 768 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 256 x 192 pixels, 1.333:1 aspect. Name output file exactly assets/level1/props/pr_01_shamrock_shake_stand.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: specified per placement; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Shamrock Shake stand at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/props/pr_01_shamrock_shake_stand.png; measure intrinsic 256x192 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PR-01 in runtime manifest. At runtime map ID to Opening theft kiosk; place in all with anchor bottom-center; use the engine auth collider "specified per placement" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Birthday art identifies Shamrock Shake stand at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

**REJECT:** No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

**INTEGRATE:** Verify file bytes exist at assets/level1/props/pr_01_shamrock_shake_stand.png; measure intrinsic 256x192 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PR-01 in runtime manifest. At runtime map ID to Opening theft kiosk; place in all with anchor bottom-center; use the engine auth collider "specified per placement" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## PR-03 / Campus bench

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 512 × 320 | TARGET 128 × 80 | RGBA

PATH: assets/level1/props/pr_03_campus_bench.png | ZONE: all | PIVOT: bottom-center | COLLIDER: specified per placement | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET PR-03: Campus bench.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE prop art output for Quad seating obstacle. Where it appears: all. Subject/design: Old campus-style dark iron and wooden bench, side profile, clean flat top silhouette.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 320 pixels, 1.600:1 aspect; exact cleaned game-ready PNG target 128 x 80 pixels, 1.600:1 aspect. Name output file exactly assets/level1/props/pr_03_campus_bench.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: specified per placement; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Campus bench at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/props/pr_03_campus_bench.png; measure intrinsic 128x80 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PR-03 in runtime manifest. At runtime map ID to Quad seating obstacle; place in all with anchor bottom-center; use the engine auth collider "specified per placement" instead of deriving physics from pixels.

Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Birthday art identifies Campus bench at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

**REJECT:** No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

**INTEGRATE:** Verify file bytes exist at assets/level1/props/pr_03_campus_bench.png; measure intrinsic 128x80 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PR-03 in runtime manifest. At runtime map ID to Quad seating obstacle; place in all with anchor bottom-center; use the engine auth collider "specified per placement" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET PR-02: Folded menu board.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides

photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE prop art output for Opening vendor dressing. Where it appears: all. Subject/design: A chalkboard style upright A-frame sign with stylized unlettered green cup mark, pale stone sidewalk look.

RENDER AND EXPORT CONTRACT: source artwork composition 384 x 512 pixels, 0.750:1 aspect; exact cleaned game-ready PNG target 96 x 128 pixels, 0.750:1 aspect. Name output file exactly assets/level1/props/pr_02_folded_menu_board.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: specified per placement; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Folded menu board at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/props/pr_02_folded_menu_board.png; measure intrinsic 96x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PR-02 in runtime manifest. At runtime map ID to Opening vendor dressing; place in all with anchor bottom-center; use the engine auth collider "specified per placement" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Birthday art identifies Folded menu board at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

**REJECT:** No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

**INTEGRATE:** Verify file bytes exist at assets/level1/props/pr_02_folded_menu_board.png; measure intrinsic 96x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PR-02 in runtime manifest. At runtime map ID to Opening vendor dressing; place in all with anchor bottom-center; use the engine auth collider "specified per placement" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## PR-06 / Low hedge

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 512 × 256 | TARGET 128 × 64 | RGBA

PATH: assets/level1/props/pr_06_low_hedge.png | ZONE: all | PIVOT: bottom-center | COLLIDER: specified per placement | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET PR-06: Low hedge.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px

dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE prop art output for Campus lawn edging. Where it appears: all. Subject/design: Neatly clipped dark green hedgerow section, stylized chunky foliage and clear baseline.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 256 pixels, 2.000:1 aspect; exact cleaned game-ready PNG target 128 x 64 pixels, 2.000:1 aspect. Name output file exactly assets/level1/props/pr_06_low_hedge.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: specified per placement; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Low hedge at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/props/pr_06_low_hedge.png; measure intrinsic 128x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PR-06 in runtime manifest. At runtime map ID to Campus lawn edging; place in all with anchor bottom-center; use the engine auth collider "specified per placement" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Stone planter at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/props/pr_13_stone_planter.png; measure intrinsic 96x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PR-13 in runtime manifest. At runtime map ID to Dome approach dressing; place in all with anchor bottom-center; use the engine auth collider "specified per placement" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Birthday art identifies Stone planter at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

**REJECT:** No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

**INTEGRATE:** Verify file bytes exist at assets/level1/props/pr_13_stone_planter.png; measure intrinsic 96x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PR-13 in runtime manifest. At runtime map ID to Dome approach dressing; place in all with anchor bottom-center; use the engine auth collider "specified per placement" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## PR-14 / Collapsible rope barrier

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 512 × 320 | TARGET 128 × 80 | RGBA

PATH: assets/level1/props/pr_14_collapsible_rope_barrier.png | ZONE: all | PIVOT: bottom-center | COLLIDER: specified per placement | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET PR-14: Collapsible rope barrier.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE prop art output for Optional jump obstacle. Where it appears: all. Subject/design: Two short dark metal posts with a thick blue rope between, low and chunky enough to read from 960x540.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 320 pixels, 1.600:1 aspect; exact cleaned game-ready PNG target 128 x 80 pixels, 1.600:1 aspect. Name output file exactly assets/level1/props/pr_14_collapsible_rope_barrier.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: specified per placement; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Collapsible rope barrier at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/props/pr_14_collapsible_rope_barrier.png; measure intrinsic 128x80 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PR-14 in runtime manifest. At runtime map ID to Optional jump obstacle; place in all with anchor bottom-center; use the engine auth collider "specified per placement" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. **REJECT:** No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

**INTEGRATE:** Verify file bytes exist at assets/level1/props/pr_14_collapsible_rope_barrier.png; measure intrinsic 128x80 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PR-14 in runtime manifest. At runtime map ID to Optional jump obstacle; place in all with anchor bottom-center; use the engine auth collider "specified per placement" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# MC / CAMPUS PULSE OBJECTS

9 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## MC-01 / Banner bridge retracted

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 1024 × 256 | TARGET 256 × 64 | RGBA

PATH: assets/level1/mechanics/mc_01_banner_bridge_retracted.png | ZONE: all | PIVOT: bottom-center | COLLIDER: none | ANIM: one frame for this specific listed state; do NOT merge with other states

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET MC-01: Banner bridge retracted.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE mechanic art output for Pulse bridge OFF. Where it appears: all. Subject/design: Blue-and-gold cloth bridge tightly rolled up against two stone supports, clearly not walkable.

RENDER AND EXPORT CONTRACT: source artwork composition 1024 x 256 pixels, 4.000:1 aspect; exact cleaned game-ready PNG target 256 x 64 pixels, 4.000:1 aspect. Name output file exactly assets/level1/mechanics/mc_01_banner_bridge_retracted.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: none; animation-state contract: one frame for this specific listed state; do NOT merge with other states. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Silhouette identifies Banner bridge retracted before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

REJECT IF: Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/mechanics/mc_01_banner_bridge_retracted.png; measure intrinsic 256x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID MC-01 in runtime manifest. At runtime map ID to Pulse bridge OFF; place in all with anchor bottom-center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Silhouette identifies Banner bridge retracted before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

**REJECT:** Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

**INTEGRATE:** Verify file bytes exist at assets/level1/mechanics/mc_01_banner_bridge_retracted.png; measure intrinsic 256x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID MC-01 in runtime manifest. At runtime map ID to Pulse bridge OFF; place in all with anchor bottom-center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## MC-05 / Drum Beacon quiet

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 384 × 512 | TARGET 96 × 128 | RGBA

PATH: assets/level1/mechanics/mc_05_drum_beacon_quiet.png | ZONE: all | PIVOT: bottom-center | COLLIDER: hitbox=20,35,56,70 | ANIM: one frame for this specific listed state; do NOT merge with other states

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET MC-05: Drum Beacon quiet.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE mechanic art output for Manual pulse activation. Where it appears: all. Subject/design: A single standing parade bass drum on golden feet with dark blue rim and central cream drumhead; not anthropomorphic; rim ring remains unlit.

RENDER AND EXPORT CONTRACT: source artwork composition 384 x 512 pixels, 0.750:1 aspect; exact cleaned game-ready PNG target 96 x 128 pixels, 0.750:1 aspect. Name output file exactly assets/level1/mechanics/mc_05_drum_beacon_quiet.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: hitbox=20,35,56,70; animation-state contract: one frame for this specific listed state; do NOT merge with other states. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Silhouette identifies Drum Beacon quiet before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

REJECT IF: Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/mechanics/mc_05_drum_beacon_quiet.png; measure intrinsic 96x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID MC-05 in runtime manifest. At runtime map ID to Manual pulse activation; place in all with anchor bottom-center; use the engine auth collider "hitbox=20,35,56,70" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Silhouette identifies Drum Beacon quiet before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

**REJECT:** Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

**INTEGRATE:** Verify file bytes exist at assets/level1/mechanics/mc_05_drum_beacon_quiet.png; measure intrinsic 96x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID MC-05 in runtime manifest. At runtime map ID to Manual pulse activation; place in all with anchor bottom-center; use the engine auth collider "hitbox=20,35,56,70" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

**INTEGRATE:** Verify file bytes exist at assets/level1/mechanics/mc_09_final_route_flag.png; measure intrinsic 64x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID MC-09 in runtime manifest. At runtime map ID to Optional exit marker; place in all with anchor bottom-center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# EN / CAMPUS ENEMY STATES

7 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## EN-01 / Cup Crawler walk A

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 256 × 256 | TARGET 64 × 64 | RGBA

PATH: assets/level1/enemies/en_01_cup_crawler_walk_a.png | ZONE: all | PIVOT: bottom-center | COLLIDER: hurtbox=13,25,38,30 | ANIM: one frame for this specific listed state; do NOT merge with other states

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET EN-01: Cup Crawler walk A.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE enemy art output for Ground enemy patrol. Where it appears: all. Subject/design: Funny low mechanical stacked-paper-cup robot on two short gears, cream cups, dark blue chassis and vivid orange warning eye; side-on facing right, feet grounded, no arms.

RENDER AND EXPORT CONTRACT: source artwork composition 256 x 256 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 64 x 64 pixels, 1.000:1 aspect. Name output file exactly assets/level1/enemies/en_01_cup_crawler_walk_a.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: hurtbox=13,25,38,30; animation-state contract: one frame for this specific listed state; do NOT merge with other states. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Cup Crawler walk A state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/enemies/en_01_cup_crawler_walk_a.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EN-01 in runtime manifest. At runtime map ID to Ground enemy patrol; place in all with anchor bottom-center; use the engine auth collider "hurtbox=13,25,38,30" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas

coordinates, or real file metadata.

**PASS:** One unambiguous Cup Crawler walk A state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** Verify file bytes exist at assets/level1/enemies/en_01_cup_crawler_walk_a.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EN-01 in runtime manifest. At runtime map ID to Ground enemy patrol; place in all with anchor bottom-center; use the engine auth collider "hurtbox=13,25,38,30" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## EN-04 / Confetti cannon idle

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 384 × 384 | TARGET 96 × 96 | RGBA

PATH: assets/level1/enemies/en_04_confetti_cannon_idle.png | ZONE: all | PIVOT: bottom-center | COLLIDER: hurtbox=18,34,60,58 | ANIM: one frame for this specific listed state; do NOT merge with other states

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET EN-04: Confetti cannon idle.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE enemy art output for Stationary ranged hazard. Where it appears: all. Subject/design: Fictional blue-and-gold parade confetti machine: compact squat metal base, short upward-angled tube facing left; orange caution accent on muzzle.

RENDER AND EXPORT CONTRACT: source artwork composition 384 x 384 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 96 x 96 pixels, 1.000:1 aspect. Name output file exactly assets/level1/enemies/en_04_confetti_cannon_idle.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: hurtbox=18,34,60,58; animation-state contract: one frame for this specific listed state; do NOT merge with other states. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Confetti cannon idle state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/enemies/en_04_confetti_cannon_idle.png; measure intrinsic 96x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EN-04 in runtime manifest. At runtime map ID to

Stationary ranged hazard; place in all with anchor bottom-center; use the engine auth collider "hurtbox=18,34,60,58" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph,

generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE enemy art output for Hazard burst release. Where it appears: all. Subject/design: SAME cannon unchanged with short paper burst at muzzle, crisp paper clumps projecting left, no huge smoke cloud.

RENDER AND EXPORT CONTRACT: source artwork composition 384 x 384 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 96 x 96 pixels, 1.000:1 aspect. Name output file exactly assets/level1/enemies/en_06_confetti_cannon_firing.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: hurtbox=18,34,60,58; animation-state contract: one frame for this specific listed state; do NOT merge with other states. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: One unambiguous Confetti cannon firing state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

REJECT IF: Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/enemies/en_06_confetti_cannon_firing.png; measure intrinsic 96x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EN-06 in runtime manifest. At runtime map ID to Hazard burst release; place in all with anchor bottom-center; use the engine auth collider "hurtbox=18,34,60,58" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** One unambiguous Confetti cannon firing state with one subject, readable outline at 64px preview, consistent species/markings/costume, matching ground anchor and genuine RGBA edge; cropped limbs or tails rejected.

**REJECT:** Wrong species, pose inconsistency with approved reference, extra heads/limbs/tails, missing glasses on Cinnamon, fox copied red-panda bands, baked weapons/cups not authorized, frame misalignment.

**INTEGRATE:** Verify file bytes exist at assets/level1/enemies/en_06_confetti_cannon_firing.png; measure intrinsic 96x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EN-06 in runtime manifest. At runtime map ID to Hazard burst release; place in all with anchor bottom-center; use the engine auth collider "hurtbox=18,34,60,58" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# CO / COLLECTIBLES

4 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## CO-01 / Green shake token

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 128 × 128 | TARGET 32 × 32 | RGBA

PATH: assets/level1/collectibles/co_01_green_shake_token.png | ZONE: all | PIVOT: center | COLLIDER: pickup_radius=12 | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET CO-01: Green shake token.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE pickup art output for Optional ordinary pickup. Where it appears: all. Subject/design: Bright readable green circular arcade token featuring central white shamrock silhouette; gold thin rim and subtle dark green inner shadow; no letters or numbers.

RENDER AND EXPORT CONTRACT: source artwork composition 128 x 128 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 32 x 32 pixels, 1.000:1 aspect. Name output file exactly assets/level1/collectibles/co_01_green_shake_token.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: pickup_radius=12; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Silhouette identifies Green shake token before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

REJECT IF: Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/collectibles/co_01_green_shake_token.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID CO-01 in runtime manifest. At runtime map ID to Optional ordinary pickup; place in all with anchor center; use the engine auth collider "pickup_radius=12" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Silhouette identifies Green shake token before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

**REJECT:** Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

**INTEGRATE:** Verify file bytes exist at assets/level1/collectibles/co_01_green_shake_token.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID CO-01 in runtime manifest. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# VF / CAMPUS VISUAL EFFECTS

10 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## VF-01 / GO pulse halo

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 512 × 512 | TARGET 128 × 128 | RGBA

PATH: assets/level1/effects/vf_01_go_pulse_halo.png | ZONE: all | PIVOT: center | COLLIDER: none | ANIM: one frame for this specific listed state; do NOT merge with other states

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET VF-01: GO pulse halo.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Pulse affordance. Where it appears: all. Subject/design: Single concentric thick blue and gold cartoon ripple ring with clean negative center; transparent; no symbols or text.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 512 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 128 x 128 pixels, 1.000:1 aspect. Name output file exactly assets/level1/effects/vf_01_go_pulse_halo.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: none; animation-state contract: one frame for this specific listed state; do NOT merge with other states. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates GO pulse halo in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/effects/vf_01_go_pulse_halo.png; measure intrinsic 128x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID VF-01 in runtime manifest. At runtime map ID to Pulse affordance; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Transparent impact/tell layer communicates GO pulse halo in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

**REJECT:** Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

**INTEGRATE:** Verify file bytes exist at assets/level1/effects/vf_01_go_pulse_halo.png; measure intrinsic 128x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID VF-01 in runtime manifest. At runtime map ID to Pulse affordance; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

---

## VF-02 / IRISH pulse settle

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 512 × 512 | TARGET 128 × 128 | RGBA

PATH: assets/level1/effects/vf_02_irish_pulse_settle.png | ZONE: all | PIVOT: center | COLLIDER: none | ANIM: one frame for this specific listed state; do NOT merge with other states

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET VF-02: IRISH pulse settle.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Pulse reset affordance. Where it appears: all. Subject/design: Same outline thickness as GO pulse but contracting dull gold rings with muted blue echo, transparent central opening.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 512 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 128 x 128 pixels, 1.000:1 aspect. Name output file exactly assets/level1/effects/vf_02_irish_pulse_settle.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: none; animation-state contract: one frame for this specific listed state; do NOT merge with other states. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates IRISH pulse settle in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/effects/vf_02_irish_pulse_settle.png; measure intrinsic 128x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID VF-02 in runtime manifest. At runtime map ID to Pulse reset affordance; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one

file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Transparent impact/tell layer communicates IRISH pulse settle in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

**REJECT:** Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

**INTEGRATE:** Verify file bytes exist at assets/level1/effects/vf_02_irish_pulse_settle.png; measure intrinsic 128x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID VF-02 in runtime manifest. At runtime map ID to Pulse reset affordance; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates Projectile hit burst in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/effects/vf_07_projectile_hit_burst.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID VF-07 in runtime manifest. At runtime map ID to Dangerous projectile contact; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Transparent impact/tell layer communicates Projectile hit burst in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

**REJECT:** Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

**INTEGRATE:** Verify file bytes exist at assets/level1/effects/vf_07_projectile_hit_burst.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID VF-07 in runtime manifest. At runtime map ID to Dangerous projectile contact; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## VF-08 / Checkpoint gleam

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 512 × 512 | TARGET 128 × 128 | RGBA

PATH: assets/level1/effects/vf_08_checkpoint_gleam.png | ZONE: all | PIVOT: center | COLLIDER: none | ANIM: one frame for this specific listed state; do NOT merge with other states

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET VF-08: Checkpoint gleam.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px

dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Checkpoint acceptance. Where it appears: all. Subject/design: Gentle golden diamond ring and sparse tiny blue sparks around empty center, no words.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 512 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 128 x 128 pixels, 1.000:1 aspect. Name output file exactly assets/level1/effects/vf_08_checkpoint_gleam.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: none; animation-state contract: one frame for this specific listed state; do NOT merge with other states. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates Checkpoint gleam in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/effects/vf_08_checkpoint_gleam.png; measure intrinsic 128x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID VF-08 in runtime manifest. At runtime map ID to Checkpoint acceptance; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# FX / TRANSITIONS / STORY EFFECTS

4 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## FX-01 / Fox thief holding shake

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 384 × 384 | TARGET 96 × 96 | RGBA

PATH: assets/level1/fox/fx_01_fox_thief_holding_shake.png | ZONE: all | PIVOT: bottom-center | COLLIDER: none | ANIM: one frame for this specific listed state; do NOT merge with other states

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET FX-01: Fox thief holding shake.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Theft scene / silhouette read. Where it appears: all. Subject/design: CANDIDATE only: lean rust-red cartoon fox, pointed triangular ears, cream pointed muzzle, dark charcoal paws and slim pointed tail, one forepaw shaped to grip an independently composited separate shake cup but CUP ITSELF ABSENT; clearly NOT a red panda, no glasses/headband or human clothing.

RENDER AND EXPORT CONTRACT: source artwork composition 384 x 384 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 96 x 96 pixels, 1.000:1 aspect. Name output file exactly assets/level1/fox/fx_01_fox_thief_holding_shake.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: none; animation-state contract: one frame for this specific listed state; do NOT merge with other states. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. ## FX-02 / Fox escape sprint

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 384 × 384 | TARGET 96 × 96 | RGBA

PATH: assets/level1/fox/fx_02_fox_escape_sprint.png | ZONE: all | PIVOT: bottom-center | COLLIDER: none | ANIM: one frame for this specific listed state; do NOT merge with other states

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET FX-02: Fox escape sprint.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Scripted first and final escape. Where it appears: all. Subject/design: SAME provisional fox identity from FX-01 sprinting right with long swept tail; one hand curled around an EMPTY space reserved for the independent CO-03 cup overlay; NO cup painted into this Fox image; readable silhouette and stable foot line.

RENDER AND EXPORT CONTRACT: source artwork composition 384 x 384 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 96 x 96 pixels, 1.000:1 aspect. Name output file exactly assets/level1/fox/fx_02_fox_escape_sprint.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: none; animation-state contract: one frame for this specific listed state; do NOT merge with other states. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates Fox escape sprint in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/fox/fx_02_fox_escape_sprint.png; measure intrinsic 96x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID FX-02 in runtime manifest. At runtime map ID to Scripted first and final escape; place in all with anchor bottom-center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. ## FX-03 / Fox mocking taunt

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 384 × 384 | TARGET 96 × 96 | RGBA

PATH: assets/level1/fox/fx_03_fox_mocking_taunt.png | ZONE: all | PIVOT: bottom-center | COLLIDER: none | ANIM: one frame for this specific listed state; do NOT merge with other states

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET FX-03: Fox mocking taunt.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Final scripted decoy reveal. Where it appears: all. Subject/design: SAME provisional fox facing player three-quarter, smug eyebrow and small beckoning pose, cup omitted because the CO-03 cup is a separate runtime overlay; readable from platformer camera.

RENDER AND EXPORT CONTRACT: source artwork composition 384 x 384 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 96 x 96 pixels, 1.000:1 aspect. Name output file exactly assets/level1/fox/fx_03_fox_mocking_taunt.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: none; animation-state contract: one frame for this specific listed state; do NOT merge with other states. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates Fox mocking taunt in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/fox/fx_03_fox_mocking_taunt.png; measure intrinsic 96x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID FX-03 in runtime manifest. At runtime map ID to Final scripted decoy reveal; place in all with anchor bottom-center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Transparent impact/tell layer communicates Fox mocking taunt in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

**REJECT:** Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

**INTEGRATE:** Verify file bytes exist at assets/level1/fox/fx_03_fox_mocking_taunt.png; measure intrinsic 96x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID FX-03 in runtime manifest. At runtime map ID to Final scripted decoy reveal; place in all with anchor bottom-center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## FX-04 / Cardboard fox decoy

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 384 × 448 | TARGET 96 × 112 | RGBA

PATH: assets/level1/fox/fx_04_cardboard_fox_decoy.png | ZONE: all | PIVOT: bottom-center | COLLIDER: none | ANIM: one frame for this specific listed state; do NOT merge with other states

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET FX-04: Cardboard fox decoy.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Optional getaway joke. Where it appears: all. Subject/design: Obviously flimsy illustrated fox cutout on tiny springboard pedestal, with cartoon tongue drawn on cardboard; NOT an actual extra animal.

RENDER AND EXPORT CONTRACT: source artwork composition 384 x 448 pixels, 0.857:1 aspect; exact cleaned game-ready PNG target 96 x 112 pixels, 0.857:1 aspect. Name output file exactly assets/level1/fox/fx_04_cardboard_fox_decoy.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# UI / BASE INTERFACE

9 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## UI-01 / Filled heart icon

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 128 × 128 | TARGET 32 × 32 | RGBA

PATH: assets/level1/ui/ui_01_filled_heart_icon.png | ZONE: all | PIVOT: center | COLLIDER: none | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET UI-01: Filled heart icon.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE ui art output for HUD health. Where it appears: all. Subject/design: Chunky deep red pixel-art heart with cream highlight, thick dark contour, no numbers.

RENDER AND EXPORT CONTRACT: source artwork composition 128 x 128 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 32 x 32 pixels, 1.000:1 aspect. Name output file exactly assets/level1/ui/ui_01_filled_heart_icon.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: none; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

REJECT IF: Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/ui/ui_01_filled_heart_icon.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UI-01 in runtime manifest. At runtime map ID to HUD health; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

DO NOT BAKE LIVE TEXT: all headings, counters, accessibility instructions, and birthday name are separate runtime DOM/canvas text layers with localization/layout flexibility. Allow the specified text-safe regions to remain clear.

**PASS:** Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

**REJECT:** Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

**INTEGRATE:** Verify file bytes exist at assets/level1/ui/ui_01_filled_heart_icon.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UI-01 in runtime manifest. At runtime map ID to HUD health; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## UI-05 / Tail-swish glyph

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 192 × 192 | TARGET 48 × 48 | RGBA

PATH: assets/level1/ui/ui_05_tail_swish_glyph.png | ZONE: all | PIVOT: center | COLLIDER: none | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET UI-05: Tail-swish glyph.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE ui art output for Touch/key tutorial. Where it appears: all. Subject/design: Stylized orange sweeping curved tail shape and directional arc, NOT a Cinnamon character render or severed tail; white/gold on navy button.

RENDER AND EXPORT CONTRACT: source artwork composition 192 x 192 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 48 x 48 pixels, 1.000:1 aspect. Name output file exactly assets/level1/ui/ui_05_tail_swish_glyph.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: none; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Legacy approved Level 1 asset design + supplied reference sheets. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

REJECT IF: Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

INTEGRATION HANDOFF: Verify file bytes exist at assets/level1/ui/ui_05_tail_swish_glyph.png; measure intrinsic 48x48 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UI-05 in runtime manifest. At runtime map ID to Touch/key tutorial; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

DO NOT BAKE LIVE TEXT: all headings, counters, accessibility instructions, and birthday name are separate runtime DOM/canvas text layers with localization/layout flexibility. Allow the specified text-safe regions to remain clear.

**PASS:** Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

**REJECT:** Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

**INTEGRATE:** Verify file bytes exist at assets/level1/ui/ui_05_tail_swish_glyph.png; measure intrinsic 48x48 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UI-05 in runtime manifest. At runtime map ID to Touch/key tutorial; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## UI-06 / Move arrows glyph

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 192 × 192 | TARGET 48 × 48 | RGBA

PATH: assets/level1/ui/ui_06_move_arrows_glyph.png | ZONE: all | PIVOT: center | COLLIDER: none | ANIM: single static component

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET UI-06: Move arrows glyph.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE ui art output for Touch/key tutorial. Where it appears: all. Subject/design: Pair of opposite horizontal white arrows arranged symmetrically over navy circular backing, no alphabet letters.

RENDER AND EXPORT CONTRACT: source artwork composition 192 x 192 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 48 x 48 pixels, 1.000:1 aspect. Name output file exactly assets/level1/ui/ui_06_move_arrows_glyph.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output,

supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: none; animation-state contract: single static component. The actual game colliders are defined by code, not copied from artwork.

Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# DM-BG / DOME PARALLAX / VIEWPORTS

8 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## DM-BG01 / Dome approach hero panorama

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 1920 × 1080 | TARGET 960 × 540 | RGB

PATH: assets/production/dome/backgrounds/dm_bg01.png | ZONE: dome | PIVOT: top-left | COLLIDER: none | ANIM: static repeat as specified in integration metadata

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-BG01: Dome approach hero panorama.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE background art output for Dome parallax/landmark layer. Where it appears: dome. Subject/design: Side-scrolling picturesque Notre Dame Main Building on broad quad approach with golden cupola, symmetrical masonry facades, trees flanking without obstructing play. No playable ledges painted into backdrop.

RENDER AND EXPORT CONTRACT: source artwork composition 1920 x 1080 pixels, 1.778:1 aspect; exact cleaned game-ready PNG target 960 x 540 pixels, 1.778:1 aspect. Name output file exactly assets/production/dome/backgrounds/dm_bg01.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: full-bleed 2D side-on orthographic parallax plane. Anchor / pivot: top-left; collision declaration: none; animation-state contract: static repeat as specified in integration metadata. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: opaque RGB, full bleed, no fake transparent grid; seamless clear edges with no border. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Original Notre Dame Golden Dome silhouette and character palette. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Painted parallax composition fills exactly 960x540 final pixels without stretched subjects or foreground colliders; low-contrast traversable negative space leaves player and telegraphs readable, 16-bit palette consistent.

REJECT IF: Playable ledges or signs baked into a background; wrong landmark silhouette; photorealism; text; high-contrast clutter masking the player; missing intentional sky/open space.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/backgrounds/dm_bg01.png; measure intrinsic 960x540 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-BG01 in runtime manifest. At runtime map ID to Dome parallax/landmark layer; place in dome with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas

coordinates, or real file metadata.

DO NOT BAKE LIVE TEXT: all headings, counters, accessibility instructions, and birthday name are separate runtime DOM/canvas text layers with localization/layout flexibility. Allow the specified text-safe regions to remain clear.

**PASS:** Painted parallax composition fills exactly 960x540 final pixels without stretched subjects or foreground colliders; low-contrast traversable negative space leaves player and telegraphs readable, 16-bit palette consistent.

**REJECT:** Playable ledges or signs baked into a background; wrong landmark silhouette; photorealism; text; high-contrast clutter masking the player; missing intentional sky/open space.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/backgrounds/dm_bg01.png; measure intrinsic 960x540 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-BG01 in runtime manifest. At runtime map ID to Dome parallax/landmark layer; place in dome with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## DM-BG02 / Dome wall parallax midground

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 1920 × 2160 | TARGET 960 × 1080 | RGBA

PATH: assets/production/dome/backgrounds/dm_bg02.png | ZONE: dome | PIVOT: top-left | COLLIDER: none | ANIM: static repeat as specified in integration metadata

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-BG02: Dome wall parallax midground.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE background art output for Dome parallax/landmark layer. Where it appears: dome. Subject/design: Tall light limestone / rosy masonry wall with repeated window arches, buttresses and cornices; vertical seamless extension top/bottom, low contrast behind players.

RENDER AND EXPORT CONTRACT: source artwork composition 1920 x 2160 pixels, 0.889:1 aspect; exact cleaned game-ready PNG target 960 x 1080 pixels, 0.889:1 aspect. Name output file exactly assets/production/dome/backgrounds/dm_bg02.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: full-bleed 2D side-on orthographic parallax plane. Anchor / pivot: top-left; collision declaration: none; animation-state contract: static repeat as specified in integration metadata. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Original Notre Dame Golden Dome silhouette and character palette. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Painted parallax composition fills exactly 960x1080 final pixels without stretched subjects or foreground colliders; low-contrast traversable negative space leaves player and telegraphs readable, 16-bit palette consistent.

REJECT IF: Playable ledges or signs baked into a background; wrong landmark silhouette; photorealism; text; high-contrast clutter masking the player; missing intentional sky/open space.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/backgrounds/dm_bg02.png; measure intrinsic 960x1080 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-BG02 in runtime manifest. At runtime map ID to Dome parallax/landmark layer; place in dome with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

DO NOT BAKE LIVE TEXT: all headings, counters, accessibility instructions, and birthday name are separate runtime DOM/canvas text layers with localization/layout flexibility. Allow the specified text-safe regions to remain clear.

**PASS:** Painted parallax composition fills exactly 960x1080 final pixels without stretched subjects or foreground colliders; low-contrast traversable negative space leaves player and telegraphs readable, 16-bit palette consistent.

**REJECT:** Playable ledges or signs baked into a background; wrong landmark silhouette; photorealism; text; high-contrast clutter masking the player; missing intentional sky/open space.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/backgrounds/dm_bg02.png; measure intrinsic 960x1080 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-BG02 in runtime manifest. At runtime map ID to Dome parallax/landmark layer; place in dome with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## DM-BG06 / Bell Gallery shadow layer

PRIORITY P2 | STATUS MISSING_GENERATION | SOURCE 1920 × 1080 | TARGET 960 × 540 | RGBA

PATH: assets/production/dome/backgrounds/dm_bg06.png | ZONE: dome | PIVOT: top-left | COLLIDER: none | ANIM: static repeat as specified in integration metadata

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-BG06: Bell Gallery shadow layer.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE background art output for Dome parallax/landmark layer. Where it appears: dome. Subject/design: Dark ochre beams, masonry openings and interior depth shapes, fully orthographic and low-frequency.

RENDER AND EXPORT CONTRACT: source artwork composition 1920 x 1080 pixels, 1.778:1 aspect; exact cleaned game-ready PNG target 960 x 540 pixels, 1.778:1 aspect. Name output file exactly assets/production/dome/backgrounds/dm_bg06.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: full-bleed 2D side-on orthographic parallax plane. Anchor / pivot: top-left; collision declaration: none; animation-state contract: static repeat as specified in integration metadata. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Original Notre Dame Golden Dome silhouette and character palette. Required priority P2 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Painted parallax composition fills exactly 960x540 final pixels without stretched subjects or foreground colliders; low-contrast traversable negative space leaves player and telegraphs readable, 16-bit palette consistent.

REJECT IF: Playable ledges or signs baked into a background; wrong landmark silhouette; photorealism; text; high-contrast clutter masking the player; missing intentional sky/open space.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/backgrounds/dm_bg06.png; measure intrinsic 960x540 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-BG06 in runtime manifest. At runtime map ID to Dome parallax/landmark layer; place in dome with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

DO NOT BAKE LIVE TEXT: all headings, counters, accessibility instructions, and birthday name are separate runtime DOM/canvas text layers with localization/layout flexibility. Allow the specified text-safe regions to remain clear.

**PASS:** Painted parallax composition fills exactly 960x540 final pixels without stretched subjects or foreground colliders; low-contrast traversable negative space leaves player and telegraphs readable, 16-bit palette consistent.

**REJECT:** Playable ledges or signs baked into a background; wrong landmark silhouette; photorealism; text; high-contrast clutter masking the player; missing intentional sky/open space.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/backgrounds/dm_bg06.png; measure intrinsic 960x540 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-BG06 in runtime manifest. At runtime map ID to Dome parallax/landmark layer; place in dome with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## DM-BG08 / Fox finale night glow

PRIORITY P2 | STATUS MISSING_GENERATION | SOURCE 1920 × 1080 | TARGET 960 × 540 | RGBA

PATH: assets/production/dome/backgrounds/dm_bg08.png | ZONE: dome | PIVOT: top-left | COLLIDER: none | ANIM: static repeat as specified in integration metadata

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-BG08: Fox finale night glow.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE background art output for Dome parallax/landmark layer. Where it appears: dome. Subject/design: Subtle blue-gold vignette and celebratory distant campus lights with transparent center; no physical scene content.

RENDER AND EXPORT CONTRACT: source artwork composition 1920 x 1080 pixels, 1.778:1 aspect; exact cleaned game-ready PNG target 960 x 540 pixels, 1.778:1 aspect. Name output file exactly assets/production/dome/backgrounds/dm_bg08.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: full-bleed 2D side-on orthographic parallax plane. Anchor / pivot: top-left; collision declaration: none; animation-state contract: static repeat as specified in integration metadata. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Original Notre Dame Golden Dome silhouette and character palette. Required priority P2 (P0=core first, P1=polish, P2=optional). At runtime map ID to Dome parallax/landmark layer; place in dome with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# DM-TL / DOME STONE / GOLDEN TILES

16 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## DM-TL01 / Limestone walkable cap

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 64 × 64 | TARGET 32 × 32 | RGBA

PATH: assets/production/dome/tiles/dm_tl01.png | ZONE: dome | PIVOT: tile top-left | COLLIDER: tile AABB | ANIM: static tile, edge seams must align

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-TL01: Limestone walkable cap.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE tile art output for Dome authored collision art or decoration. Where it appears: dome. Subject/design: Side-view 32px seamless cream limestone walkway bright top lip, no perspective skew.

RENDER AND EXPORT CONTRACT: source artwork composition 64 x 64 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 32 x 32 pixels, 1.000:1 aspect. Name output file exactly assets/production/dome/tiles/dm_tl01.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: tile top-left; collision declaration: tile AABB; animation-state contract: static tile, edge seams must align. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: 32px world tile grid and existing platforms geometry. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

REJECT IF: Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/tiles/dm_tl01.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-TL01 in runtime manifest. At runtime map ID to Dome authored collision art or decoration; place in dome with anchor tile top-left; use the engine auth collider "tile AABB" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

TILE EDGE REQUIREMENT: art edges must meet exactly with adjacent tile copies; preserve a flat top lip where stated; one 32px world tile equals one authored grid cell, regardless of generation source resolution. No perspective shading that ruins the repeated flat gameplay plane.

**PASS:** Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

**REJECT:** Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/tiles/dm_tl01.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-TL01 in runtime manifest. At runtime map ID to Dome authored collision art or decoration; place in dome with anchor tile top-left; use the engine auth collider "tile AABB" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## DM-TL09 / Scaffold deck center

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 64 × 64 | TARGET 32 × 32 | RGBA

PATH: assets/production/dome/tiles/dm_tl09.png | ZONE: dome | PIVOT: tile top-left | COLLIDER: one-way AABB top | ANIM: static tile, edge seams must align

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-TL09: Scaffold deck center.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE tile art output for Dome authored collision art or decoration. Where it appears: dome. Subject/design: Deep navy parade-stage plank with bright gold safety rim and strong top line.

RENDER AND EXPORT CONTRACT: source artwork composition 64 x 64 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 32 x 32 pixels, 1.000:1 aspect. Name output file exactly assets/production/dome/tiles/dm_tl09.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: tile top-left; collision declaration: one-way AABB top; animation-state contract: static tile, edge seams must align. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: 32px world tile grid and existing platforms geometry. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

REJECT IF: Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/tiles/dm_tl09.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-TL09 in runtime manifest. At runtime map ID to Dome authored collision art or decoration; place in dome with anchor tile top-left; use the engine auth collider "one-way AABB top" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

TILE EDGE REQUIREMENT: art edges must meet exactly with adjacent tile copies; preserve a flat top lip where stated; one 32px world tile equals one authored grid cell, regardless of generation source resolution. No perspective shading that ruins the repeated flat gameplay plane.

**PASS:** Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

**REJECT:** Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/tiles/dm_tl09.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-TL09 in runtime manifest. At runtime map ID to Dome authored collision art or decoration; place in dome with anchor tile top-left; use the engine auth collider "one-way AABB top" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: 32px world tile grid and existing platforms geometry. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

REJECT IF: Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/tiles/dm_tl08.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-TL08 in runtime manifest. At runtime map ID to Dome authored collision art or decoration; place in dome with anchor tile top-left; use the engine auth collider "one-way AABB top" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

TILE EDGE REQUIREMENT: art edges must meet exactly with adjacent tile copies; preserve a flat top lip where stated; one 32px world tile equals one authored grid cell, regardless of generation source resolution. No perspective shading that ruins the repeated flat gameplay plane.

**PASS:** Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

**REJECT:** Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/tiles/dm_tl08.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-TL08 in runtime manifest. At runtime map ID to Dome authored collision art or decoration; place in dome with anchor tile top-left; use the engine auth collider "one-way AABB top" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## DM-TL10 / Scaffold steel support

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 64 × 64 | TARGET 32 × 32 | RGBA

PATH: assets/production/dome/tiles/dm_tl10.png | ZONE: dome | PIVOT: tile top-left | COLLIDER: no collision | ANIM: static tile, edge seams must align

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-TL10: Scaffold steel support.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE tile art output for Dome authored collision art or decoration. Where it appears: dome. Subject/design: Thin blue-grey lattice bracing for temporary platforms, decor only and repeatable vertically.

RENDER AND EXPORT CONTRACT: source artwork composition 64 x 64 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 32 x 32 pixels, 1.000:1 aspect. Name output file exactly assets/production/dome/tiles/dm_tl10.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: tile top-left; collision declaration: no collision; animation-state contract: static tile, edge seams must align. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: 32px world tile grid and existing platforms geometry. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

REJECT IF: Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/tiles/dm_tl10.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-TL10 in runtime manifest. At runtime map ID to Dome authored collision art or decoration; place in dome with anchor tile top-left; use the engine auth collider "no collision" instead of deriving physics from pixels.

Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

TILE EDGE REQUIREMENT: art edges must meet exactly with adjacent tile copies; preserve a flat top lip where stated; one 32px world tile equals one authored grid cell, regardless of generation source resolution. No perspective shading that ruins the repeated flat gameplay plane.

**PASS:** Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

**REJECT:** Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

## DM-TL14 / Cracked landing platform

PRIORITY P2 | STATUS MISSING_GENERATION | SOURCE 64 × 64 | TARGET 32 × 32 | RGBA

PATH: assets/production/dome/tiles/dm_tl14.png | ZONE: dome | PIVOT: tile top-left | COLLIDER: one-way AABB top | ANIM: static tile, edge seams must align

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-TL14: Cracked landing platform.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE tile art output for Dome authored collision art or decoration. Where it appears: dome. Subject/design: Readable chipped surface and pale fissures, same collision line as DM-TL01; not collapsing unless script authorizes.

RENDER AND EXPORT CONTRACT: source artwork composition 64 x 64 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 32 x 32 pixels, 1.000:1 aspect. Name output file exactly assets/production/dome/tiles/dm_tl14.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: tile top-left; collision declaration: one-way AABB top; animation-state contract: static tile, edge seams must align. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: 32px world tile grid and existing platforms geometry. Required priority P2 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

REJECT IF: Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/tiles/dm_tl14.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-TL14 in runtime manifest. At runtime map ID to Dome authored collision art or decoration; place in dome with anchor tile top-left; use the engine auth collider "one-way AABB top" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

TILE EDGE REQUIREMENT: art edges must meet exactly with adjacent tile copies; preserve a flat top lip where stated; one 32px world tile equals one authored grid cell, regardless of generation source resolution. No perspective shading that ruins the repeated flat gameplay plane.

**PASS:** Exact 32x32 authored tile, strong visible intended support edge, repeat seams invisible where tile type is repeatable, no canvas margin or stray pixels.

**REJECT:** Perspective tilt, non-level support line, seam discontinuity, detached floating pixels, baked entire platform assembly in one tile.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/tiles/dm_tl14.png; measure intrinsic 32x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-TL14 in runtime manifest. At runtime map ID to Dome authored collision art or decoration; place in dome with anchor tile top-left; use the engine auth collider "one-way AABB top" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# DM-PR / DOME ARCHITECTURE / PROPS

10 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## DM-PR01 / Main Building window module

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 256 × 384 | TARGET 128 × 192 | RGBA

PATH: assets/production/dome/props/dm_pr01.png | ZONE: dome | PIVOT: base-center | COLLIDER: none unless separately scripted | ANIM: static prop

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-PR01: Main Building window module.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE prop art output for Dome atmosphere and architecture dressing. Where it appears: dome. Subject/design: Tall rectangular warm stone window with pale blue reflective panes, dark brown framing, limestone sill; no words or people.

RENDER AND EXPORT CONTRACT: source artwork composition 256 x 384 pixels, 0.667:1 aspect; exact cleaned game-ready PNG target 128 x 192 pixels, 0.667:1 aspect. Name output file exactly assets/production/dome/props/dm_pr01.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: base-center; collision declaration: none unless separately scripted; animation-state contract: static prop. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Dome hero backdrop and actual level geometry, not baked collisions. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Main Building window module at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/props/dm_pr01.png; measure intrinsic 128x192 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-PR01 in runtime manifest. At runtime map ID to Dome atmosphere and architecture dressing; place in dome with anchor base-center; use the engine auth collider "none unless separately scripted" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Birthday art identifies Main Building window module at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

**REJECT:** No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/props/dm_pr01.png; measure intrinsic 128x192 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-PR01 in runtime manifest. At runtime map ID to Dome atmosphere and architecture dressing; place in dome with anchor base-center; use the engine auth collider "none unless separately scripted" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## DM-PR03 / Cupola hero silhouette

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 1024 × 768 | TARGET 512 × 384 | RGBA

PATH: assets/production/dome/props/dm_pr03.png | ZONE: dome | PIVOT: bottom-center | COLLIDER: none unless separately scripted | ANIM: static prop

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-PR03: Cupola hero silhouette.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE prop art output for Dome atmosphere and architecture dressing. Where it appears: dome. Subject/design: Recognizable broad golden hemisphere roof above straight symmetrical stone base, gold illuminated bands; do not add a separate statue to this layer.

RENDER AND EXPORT CONTRACT: source artwork composition 1024 x 768 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 512 x 384 pixels, 1.333:1 aspect. Name output file exactly assets/production/dome/props/dm_pr03.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: none unless separately scripted; animation-state contract: static prop. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Dome hero backdrop and actual level geometry, not baked collisions. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Cupola hero silhouette at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/props/dm_pr03.png; measure intrinsic 512x384 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-PR03 in runtime manifest. At runtime map ID to Dome

atmosphere and architecture dressing; place in dome with anchor bottom-center; use the engine auth collider "none unless separately scripted" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. ## DM-PR04 / Mary statue silhouette

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 320 × 512 | TARGET 160 × 256 | RGBA

PATH: assets/production/dome/props/dm_pr04.png | ZONE: dome | PIVOT: bottom-center | COLLIDER: none unless separately scripted | ANIM: static prop

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-PR04: Mary statue silhouette.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE prop art output for Dome atmosphere and architecture dressing. Where it appears: dome. Subject/design: Independent simplified golden Marian statue silhouette with head, outstretched arms, straight upright pose and support plinth; accurate recognizable golden finish, respectfully rendered.

RENDER AND EXPORT CONTRACT: source artwork composition 320 x 512 pixels, 0.625:1 aspect; exact cleaned game-ready PNG target 160 x 256 pixels, 0.625:1 aspect. Name output file exactly assets/production/dome/props/dm_pr04.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. ## DM-PR05 / Summit railing section

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 512 × 192 | TARGET 256 × 96 | RGBA

PATH: assets/production/dome/props/dm_pr05.png | ZONE: dome | PIVOT: base-center | COLLIDER: none unless separately scripted | ANIM: static prop

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-PR05: Summit railing section.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE prop art output for Dome atmosphere and architecture dressing. Where it appears: dome. Subject/design: Ornate cream and gold metal safety railing low enough that it cannot obscure Cinnamon or boss hitboxes.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 192 pixels, 2.667:1 aspect; exact cleaned game-ready PNG target 256 x 96 pixels, 2.667:1 aspect. Name output file exactly assets/production/dome/props/dm_pr05.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: base-center; collision declaration: none unless separately scripted; animation-state contract: static prop. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Dome hero backdrop and actual level geometry, not baked collisions. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Summit railing section at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/props/dm_pr05.png; measure intrinsic 256x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-PR05 in runtime manifest. At runtime map ID to Dome atmosphere and architecture dressing; place in dome with anchor base-center; use the engine auth collider "none unless separately scripted" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Birthday art identifies Summit railing section at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

**REJECT:** No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/props/dm_pr05.png; measure intrinsic 256x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-PR05 in runtime manifest. At runtime map ID to Dome atmosphere and architecture dressing; place in dome with anchor base-center; use the engine auth collider "none unless separately scripted" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## DM-PR06 / Blue-and-gold heraldic pennant

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 256 × 384 | TARGET 128 × 192 | RGBA

PATH: assets/production/dome/props/dm_pr06.png | ZONE: dome | PIVOT: base-center | COLLIDER: none unless separately scripted | ANIM: static prop

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-PR06: Blue-and-gold heraldic pennant.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE prop art output for Dome atmosphere and architecture dressing. Where it appears: dome. Subject/design: Small clean fabric pennant on thin pole with no copyrighted logos or illegible lettering, lateral wind fold.

RENDER AND EXPORT CONTRACT: source artwork composition 256 x 384 pixels, 0.667:1 aspect; exact cleaned game-ready PNG target 128 x 192 pixels, 0.667:1 aspect. Name output file exactly assets/production/dome/props/dm_pr06.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: base-center; collision declaration: none unless separately scripted; animation-state contract: static prop. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Dome hero backdrop and actual level geometry, not baked collisions. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Blue-and-gold heraldic pennant at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/props/dm_pr06.png; measure intrinsic 128x192 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-PR06 in runtime manifest. At runtime map ID to Dome atmosphere and architecture dressing; place in dome with anchor base-center; use the engine auth collider "none unless separately scripted" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Birthday art identifies Blue-and-gold heraldic pennant at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

**REJECT:** No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/props/dm_pr06.png; measure intrinsic 128x192 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-PR06 in runtime manifest. At runtime map ID to Dome atmosphere and architecture dressing; place in dome with anchor base-center; use the engine auth collider "none unless separately scripted" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# DM-MC / DOME MECHANICS

10 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## DM-MC01 / Moving lift deck idle

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 512 × 128 | TARGET 256 × 64 | RGBA

PATH: assets/production/dome/mechanics/dm_mc01.png | ZONE: dome | PIVOT: top-left | COLLIDER: one-way moving AABB | ANIM: single exact mechanic state; pair shares identical pivot and bounds

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-MC01: Moving lift deck idle.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE mechanic art output for Dome authored interactive object. Where it appears: dome. Subject/design: Solid cream-gold roof repair lift with navy frame and flat walkable upper edge; no wheels on platform.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 128 pixels, 4.000:1 aspect; exact cleaned game-ready PNG target 256 x 64 pixels, 4.000:1 aspect. Name output file exactly assets/production/dome/mechanics/dm_mc01.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: top-left; collision declaration: one-way moving AABB; animation-state contract: single exact mechanic state; pair shares identical pivot and bounds. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: World pulse script, collision and alternate matching state. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Silhouette identifies Moving lift deck idle before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

REJECT IF: Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/mechanics/dm_mc01.png; measure intrinsic 256x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-MC01 in runtime manifest. At runtime map ID to Dome authored interactive object; place in dome with anchor top-left; use the engine auth collider "one-way moving AABB" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Silhouette identifies Moving lift deck idle before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

**REJECT:** Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/mechanics/dm_mc01.png; measure intrinsic 256x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-MC01 in runtime manifest. At runtime map ID to Dome authored interactive object; place in dome with anchor top-left; use the engine auth collider "one-way moving AABB" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## DM-MC03 / Pulse banner bridge off

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 512 × 128 | TARGET 256 × 64 | RGBA

PATH: assets/production/dome/mechanics/dm_mc03.png | ZONE: dome | PIVOT: top-left | COLLIDER: inactive non-collidable | ANIM: single exact mechanic state; pair shares identical pivot and bounds

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-MC03: Pulse banner bridge off.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE mechanic art output for Dome authored interactive object. Where it appears: dome. Subject/design: Retracted cloth walkway in deep blue/gold, visibly non-solid silhouette but still detectable as interaction.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 128 pixels, 4.000:1 aspect; exact cleaned game-ready PNG target 256 x 64 pixels, 4.000:1 aspect. Name output file exactly assets/production/dome/mechanics/dm_mc03.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: top-left; collision declaration: inactive non-collidable; animation-state contract: single exact mechanic state; pair shares identical pivot and bounds. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: World pulse script, collision and alternate matching state. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Silhouette identifies Pulse banner bridge off before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

REJECT IF: Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/mechanics/dm_mc03.png; measure intrinsic 256x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-MC03 in runtime manifest. At runtime map ID to Dome authored interactive object; place in dome with anchor top-left; use the engine auth collider "inactive non-collidable" instead of deriving

physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Silhouette identifies Pulse banner bridge off before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

**REJECT:** Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/mechanics/dm_mc03.png; measure intrinsic 256x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-MC03 in runtime manifest. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: World pulse script, collision and alternate matching state. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Silhouette identifies Gilded checkpoint active before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

REJECT IF: Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/dome/mechanics/dm_mc08.png; measure intrinsic 128x192 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-MC08 in runtime manifest. At runtime map ID to Dome authored interactive object; place in dome with anchor bottom-center; use the engine auth collider "proximity checkpoint" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Silhouette identifies Gilded checkpoint active before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

**REJECT:** Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

**INTEGRATE:** Verify file bytes exist at assets/production/dome/mechanics/dm_mc08.png; measure intrinsic 128x192 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID DM-MC08 in runtime manifest. At runtime map ID to Dome authored interactive object; place in dome with anchor bottom-center; use the engine auth collider "proximity checkpoint" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## DM-MC02 / Moving lift undercarriage

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 512 × 256 | TARGET 256 × 128 | RGBA

PATH: assets/production/dome/mechanics/dm_mc02.png | ZONE: dome | PIVOT: top-left | COLLIDER: none | ANIM: single exact mechanic state; pair shares identical pivot and bounds

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET DM-MC02: Moving lift undercarriage.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET

(attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE mechanic art output for Dome authored interactive object. Where it appears: dome. Subject/design: Mechanical navy/gold suspender rails below DM-MC01 platform; art visually separate, no collisions.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 256 pixels, 2.000:1 aspect; exact cleaned game-ready PNG target 256 x 128 pixels, 2.000:1 aspect. Name output file exactly assets/production/dome/mechanics/dm_mc02.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: top-left; collision declaration: none; animation-state contract: single exact mechanic state; pair shares identical pivot and bounds. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: World pulse script, collision and alternate matching state. Required priority P1 (P0=core first, P1=polish, P2=optional). Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Boss readability, counterplay and feedback. Where it appears: boss. Subject/design: Bright coral red outlined circular warning ring with transparent hollow center and three ticks toward approaching player; no fill.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 512 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 256 x 256 pixels, 1.000:1 aspect. Name output file exactly assets/production/boss/effects/bs_vf01.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: FX only, separate from hitboxes; animation-state contract: single state, no spritesheet unless intentional sequence is later verified. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Fox art approved by human + boss state machine. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates Charge telegraph ring in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/boss/effects/bs_vf01.png; measure intrinsic 256x256 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BS-VF01 in runtime manifest. At runtime map ID to Boss readability, counterplay and feedback; place in boss with anchor center; use the engine auth collider "FX only, separate from hitboxes" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Transparent impact/tell layer communicates Charge telegraph ring in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

**REJECT:** Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/boss/effects/bs_vf01.png; measure intrinsic 256x256 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BS-VF01 in runtime manifest. At runtime map ID to Boss readability, counterplay and feedback; place in boss with anchor center; use the engine auth collider "FX only, separate from hitboxes" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## BS-VF04 / Fox confetti projectile

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 128 × 128 | TARGET 64 × 64 | RGBA

PATH: assets/production/boss/effects/bs_vf04.png | ZONE: boss | PIVOT: center | COLLIDER: FX only, separate from hitboxes | ANIM: single state, no spritesheet unless intentional sequence is later verified

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET BS-VF04: Fox confetti projectile.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Boss readability, counterplay and feedback. Where it appears: boss. Subject/design: Small compact hazard cup-shaped red/orange confetti projectile clearly distinct from green collectible Shake.

RENDER AND EXPORT CONTRACT: source artwork composition 128 x 128 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 64 x 64 pixels, 1.000:1 aspect. Name output file exactly assets/production/boss/effects/bs_vf04.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: FX only, separate from hitboxes; animation-state contract: single state, no spritesheet unless intentional sequence is later verified. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Fox art approved by human + boss state machine. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates Fox confetti projectile in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/boss/effects/bs_vf04.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BS-VF04 in runtime manifest. At runtime map ID to Boss readability, counterplay and feedback; place in boss with anchor center; use the engine auth collider "FX only, separate from hitboxes" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Transparent impact/tell layer communicates Fox confetti projectile in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

**REJECT:** Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/boss/effects/bs_vf04.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BS-VF04 in runtime manifest. At runtime map ID to Boss readability, counterplay and feedback; place in boss with anchor center; use the engine auth collider "FX only, separate from hitboxes" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## BS-VF05 / Fox volley warning

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 384 × 192 | TARGET 192 × 96 | RGBA

PATH: assets/production/boss/effects/bs_vf05.png | ZONE: boss | PIVOT: center | COLLIDER: FX only, separate from hitboxes | ANIM: single state, no spritesheet unless intentional sequence is later verified

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET BS-VF05: Fox volley warning.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Boss readability, counterplay and feedback. Where it appears: boss. Subject/design: Three red chevrons and short dotted line pointing toward likely volley trajectories; transparent outline only.

RENDER AND EXPORT CONTRACT: source artwork composition 384 x 192 pixels, 2.000:1 aspect; exact cleaned game-ready PNG target 192 x 96 pixels, 2.000:1 aspect. Name output file exactly assets/production/boss/effects/bs_vf05.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Boss readability, counterplay and feedback. Where it appears: boss. Subject/design: Sharp gold starburst with cream highlights and 2 frames suggested as separate output in downstream variant.

RENDER AND EXPORT CONTRACT: source artwork composition 256 x 256 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 128 x 128 pixels, 1.000:1 aspect. Name output file exactly assets/production/boss/effects/bs_vf07.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: FX only, separate from hitboxes; animation-state contract: single state, no spritesheet unless intentional sequence is later verified. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Fox art approved by human + boss state machine. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates Fox hit shimmer in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/boss/effects/bs_vf07.png; measure intrinsic 128x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BS-VF07 in runtime manifest. At runtime map ID to Boss readability, counterplay and feedback; place in boss with anchor center; use the engine auth collider "FX only, separate from hitboxes" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Transparent impact/tell layer communicates Fox hit shimmer in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

**REJECT:** Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/boss/effects/bs_vf07.png; measure intrinsic 128x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BS-VF07 in runtime manifest. At runtime map ID to Boss readability, counterplay and feedback; place in boss with anchor center; use the engine auth collider "FX only, separate from hitboxes" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## BS-VF10 / Boss defeated puff

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 384 × 256 | TARGET 192 × 128 | RGBA

PATH: assets/production/boss/effects/bs_vf10.png | ZONE: boss | PIVOT: center | COLLIDER: FX only, separate from hitboxes | ANIM: single state, no spritesheet unless intentional sequence is later verified

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET BS-VF10: Boss defeated puff.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). # PK / COLLECTIBLES / POWERUPS / PICKUP FRAMES

6 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## PK-01 / Shake cup flip frame A

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 128 × 128 | TARGET 64 × 64 | RGBA

PATH: assets/production/pickups/pk_01.png | ZONE: campus,dome | PIVOT: center | COLLIDER: radial pickup radius authored separately | ANIM: single frame for this specific named animation state

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET PK-01: Shake cup flip frame A.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE pickup art output for Collectible animation or optional power-up. Where it appears: campus,dome. Subject/design: Mint green takeaway shake cup with whipped top, rotates 0 degree front-facing, no shadow, 64px alpha frame.

RENDER AND EXPORT CONTRACT: source artwork composition 128 x 128 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 64 x 64 pixels, 1.000:1 aspect. Name output file exactly assets/production/pickups/pk_01.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: radial pickup radius authored separately; animation-state contract: single frame for this specific named animation state. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: CO-01 pickup art + runtime entity metadata. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Silhouette identifies Shake cup flip frame A before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

REJECT IF: Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/pickups/pk_01.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PK-01 in runtime manifest. At runtime map ID to Collectible animation or optional power-up; place in campus,dome with anchor center; use the engine auth collider "radial pickup radius authored separately" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Silhouette identifies Shake cup flip frame A before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

**REJECT:** Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

**INTEGRATE:** Verify file bytes exist at assets/production/pickups/pk_01.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PK-01 in runtime manifest. At runtime map ID to Collectible animation or optional power-up; place in campus,dome with anchor center; use the engine auth collider "radial pickup radius authored separately" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## PK-02 / Shake cup flip frame B

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 128 × 128 | TARGET 64 × 64 | RGBA

PATH: assets/production/pickups/pk_02.png | ZONE: campus,dome | PIVOT: center | COLLIDER: radial pickup radius authored separately | ANIM: single frame for this specific named animation state

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET PK-02: Shake cup flip frame B.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE pickup art output for Collectible animation or optional power-up. Where it appears: campus,dome. Subject/design: Same cup turned one eighth rotation, preserves label colors and handle/straw consistency.

RENDER AND EXPORT CONTRACT: source artwork composition 128 x 128 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 64 x 64 pixels, 1.000:1 aspect. Name output file exactly assets/production/pickups/pk_02.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: radial pickup radius authored separately; animation-state contract: single frame for this specific named animation state. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: CO-01 pickup art + runtime entity metadata. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Silhouette identifies Shake cup flip frame B before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

REJECT IF: Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/pickups/pk_02.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PK-02 in runtime manifest. At runtime map ID to Collectible animation or optional power-up; place in campus,dome with anchor center; use the engine auth collider "radial pickup radius authored separately" instead of

deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Silhouette identifies Shake cup flip frame B before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

**REJECT:** Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

**INTEGRATE:** Verify file bytes exist at assets/production/pickups/pk_02.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PK-02 in runtime manifest. At runtime map ID to Collectible animation or optional power-up; place in campus,dome with anchor center; use the engine auth collider "radial pickup radius authored separately" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

---

## PK-03 / Shake cup flip frame C

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 128 × 128 | TARGET 64 × 64 | RGBA

PATH: assets/production/pickups/pk_03.png | ZONE: campus,dome | PIVOT: center | COLLIDER: radial pickup radius authored separately | ANIM: single frame for this specific named animation state

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET PK-03: Shake cup flip frame C.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE pickup art output for Collectible animation or optional power-up. Where it appears: campus,dome. Subject/design: Same cup at quarter rotation, cream lid narrower due to perspective, no extra contents.

RENDER AND EXPORT CONTRACT: source artwork composition 128 x 128 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 64 x 64 pixels, 1.000:1 aspect. Name output file exactly assets/production/pickups/pk_03.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: radial pickup radius authored separately; animation-state contract: single frame for this specific named animation state. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: CO-01 pickup art + runtime entity metadata. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Silhouette identifies Shake cup flip frame C before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

REJECT IF: Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/pickups/pk_03.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PK-03 in runtime manifest. At runtime map ID to Collectible animation or optional power-up; place in campus,dome with anchor center; use the engine auth collider "radial pickup radius authored separately" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Silhouette identifies Shake cup flip frame C before player interaction; exact frame alignment shared with other named states, unambiguous activation color, real alpha, readable at final size.

**REJECT:** Mechanic state visually indistinguishable from inactive, illegible at runtime size, baked player/character, wrong collision top, change of pivot between paired states.

**INTEGRATE:** Verify file bytes exist at assets/production/pickups/pk_03.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID PK-03 in runtime manifest. At runtime map ID to Collectible animation or optional power-up; place in campus,dome with anchor center; use the engine auth collider "radial pickup radius authored separately" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# EX-VF / ADDITIONAL EFFECTS

8 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## EX-VF01 / Dome jump burst

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 256 × 192 | TARGET 128 × 96 | RGBA

PATH: assets/production/effects/ex_vf01.png | ZONE: all | PIVOT: center | COLLIDER: FX only | ANIM: single VFX key pose/independent output

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET EX-VF01: Dome jump burst.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Interactivity/impact readability. Where it appears: all. Subject/design: Cream dust puff and faint golden leaf after Cinnamon leaps from stone cornice; independent effect.

RENDER AND EXPORT CONTRACT: source artwork composition 256 x 192 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 128 x 96 pixels, 1.333:1 aspect. Name output file exactly assets/production/effects/ex_vf01.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: FX only; animation-state contract: single VFX key pose/independent output. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Named gameplay event and existing Canvas renderer. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates Dome jump burst in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/effects/ex_vf01.png; measure intrinsic 128x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EX-VF01 in runtime manifest. At runtime map ID to Interactivity/impact readability; place in all with anchor center; use the engine auth collider "FX only" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Transparent impact/tell layer communicates Dome jump burst in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

**REJECT:** Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/effects/ex_vf01.png; measure intrinsic 128x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EX-VF01 in runtime manifest. At runtime map ID to Interactivity/impact readability; place in all with anchor center; use the engine auth collider "FX only" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## EX-VF02 / Dome moving lift motor dust

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 256 × 192 | TARGET 128 × 96 | RGBA

PATH: assets/production/effects/ex_vf02.png | ZONE: all | PIVOT: center | COLLIDER: FX only | ANIM: single VFX key pose/independent output

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET EX-VF02: Dome moving lift motor dust.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Interactivity/impact readability. Where it appears: all. Subject/design: Navy/cream mechanical small puffs below lift motor, no particles masking the platform top.

RENDER AND EXPORT CONTRACT: source artwork composition 256 x 192 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 128 x 96 pixels, 1.333:1 aspect. Name output file exactly assets/production/effects/ex_vf02.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: FX only; animation-state contract: single VFX key pose/independent output. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Named gameplay event and existing Canvas renderer. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates Dome moving lift motor dust in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/effects/ex_vf02.png; measure intrinsic 128x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EX-VF02 in runtime manifest. At runtime map ID to Interactivity/impact readability; place in all with anchor center; use the engine auth collider "FX only" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per

requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Transparent impact/tell layer communicates Dome moving lift motor dust in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

**REJECT:** Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/effects/ex_vf02.png; measure intrinsic 128x96 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EX-VF02 in runtime manifest. At runtime map ID to Interactivity/impact readability; place in all with anchor center; use the engine auth collider "FX only" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## EX-VF03 / Pulse bridge warning tick

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 512 × 64 | TARGET 256 × 32 | RGBA

PATH: assets/production/effects/ex_vf03.png | ZONE: all | PIVOT: center | COLLIDER: FX only | ANIM: single VFX key pose/independent output

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET EX-VF03: Pulse bridge warning tick.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Interactivity/impact readability. Where it appears: all. Subject/design: Thin bright gold line segment sliding along top of soon-to-retract banner bridge; no huge overlay.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 64 pixels, 8.000:1 aspect; exact cleaned game-ready PNG target 256 x 32 pixels, 8.000:1 aspect. Name output file exactly assets/production/effects/ex_vf03.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: FX only; animation-state contract: single VFX key pose/independent output. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Named gameplay event and existing Canvas renderer. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates Pulse bridge warning tick in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/effects/ex_vf03.png; measure intrinsic 256x32 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EX-VF03 in runtime manifest. At runtime map ID to Interactivity/impact readability; place in all with anchor center; use the engine auth collider "FX only" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. ## EX-VF08 / Bonus secret reveal shimmer

PRIORITY P2 | STATUS MISSING_GENERATION | SOURCE 256 × 256 | TARGET 128 × 128 | RGBA

PATH: assets/production/effects/ex_vf08.png | ZONE: all | PIVOT: center | COLLIDER: FX only | ANIM: single VFX key pose/independent output

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET EX-VF08: Bonus secret reveal shimmer.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE fx art output for Interactivity/impact readability. Where it appears: all. Subject/design: Small orange/gold concentric animated marker revealing hidden token, not a required gameplay hint.

RENDER AND EXPORT CONTRACT: source artwork composition 256 x 256 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 128 x 128 pixels, 1.000:1 aspect. Name output file exactly assets/production/effects/ex_vf08.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: center; collision declaration: FX only; animation-state contract: single VFX key pose/independent output. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Named gameplay event and existing Canvas renderer. Required priority P2 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Transparent impact/tell layer communicates Bonus secret reveal shimmer in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

REJECT IF: Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/effects/ex_vf08.png; measure intrinsic 128x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EX-VF08 in runtime manifest. At runtime map ID to Interactivity/impact readability; place in all with anchor center; use the engine auth collider "FX only" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Transparent impact/tell layer communicates Bonus secret reveal shimmer in under 0.25s at game scale without hiding dangerous hitboxes or gameplay text.

**REJECT:** Opaque rectangle, full-screen blindness, bright flashing hazard with no alternate warning, oversized particle obscuring Cinnamon, embedded actor silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/effects/ex_vf08.png; measure intrinsic 128x128 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID EX-VF08 in runtime manifest. At runtime map ID to Interactivity/impact readability; place in all with anchor center; use the engine auth collider "FX only" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# BD / BIRTHDAY REVEAL / CAKE / SHAKES

14 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## BD-01 / Birthday cake full base

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 1024 × 768 | TARGET 512 × 384 | RGBA

PATH: assets/production/birthday/bd_01.png | ZONE: finale | PIVOT: bottom-center | COLLIDER: none (decorative only) | ANIM: single static state/one-shot sprite

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET BD-01: Birthday cake full base.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE finale art output for Birthday finale visual celebration. Where it appears: finale. Subject/design: Two-tier celebratory birthday cake with pink frosting, pale cream swirls, gold trim and small shamrock motif; isolated independent cake only, no characters.

RENDER AND EXPORT CONTRACT: source artwork composition 1024 x 768 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 512 x 384 pixels, 1.333:1 aspect. Name output file exactly assets/production/birthday/bd_01.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: none (decorative only); animation-state contract: single static state/one-shot sprite. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Cinnamon existing victory pose + birthday DOM text + independent Shake cup source. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Birthday cake full base at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/birthday/bd_01.png; measure intrinsic 512x384 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BD-01 in runtime manifest. At runtime map ID to Birthday finale visual celebration; place in finale with anchor bottom-center; use the engine auth collider "none (decorative only)" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Birthday art identifies Birthday cake full base at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

**REJECT:** No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/birthday/bd_01.png; measure intrinsic 512x384 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BD-01 in runtime manifest. At runtime map ID to Birthday finale visual celebration; place in finale with anchor bottom-center; use the engine auth collider "none (decorative only)" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## BD-12 / Victory frame plaque

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 1920 × 512 | TARGET 960 × 256 | RGBA

PATH: assets/production/birthday/bd_12.png | ZONE: finale | PIVOT: top-left | COLLIDER: none (decorative only) | ANIM: single static state/one-shot sprite

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET BD-12: Victory frame plaque.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE finale art output for Birthday finale visual celebration. Where it appears: finale. Subject/design: Gold-and-navy decorative empty rectangular banner frame with generous central blank space for runtime accessible HAPPY BIRTHDAY, MAVERICK! text; never bake text in generated image.

RENDER AND EXPORT CONTRACT: source artwork composition 1920 x 512 pixels, 3.750:1 aspect; exact cleaned game-ready PNG target 960 x 256 pixels, 3.750:1 aspect. Name output file exactly assets/production/birthday/bd_12.png. Deliver one individual image file, not a collage or

contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: top-left; collision declaration: none (decorative only); animation-state contract: single static state/one-shot sprite. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Cinnamon existing victory pose + birthday DOM text + independent Shake cup source. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Victory frame plaque at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/birthday/bd_12.png; measure intrinsic 960x256 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BD-12 in runtime manifest. At runtime map ID to Birthday finale visual celebration; place in finale with anchor top-left; use the engine auth collider "none (decorative only)" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Birthday art identifies Victory frame plaque at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

**REJECT:** No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/birthday/bd_12.png; measure intrinsic 960x256 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BD-12 in runtime manifest. At runtime map ID to Birthday finale visual celebration; place in finale with anchor top-left; use the engine auth collider "none (decorative only)" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## BD-02 / Birthday cake frosting flourish

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 512 × 256 | TARGET 256 × 128 | RGBA

PATH: assets/production/birthday/bd_02.png | ZONE: finale | PIVOT: bottom-center | COLLIDER: none (decorative only) | ANIM: single static state/one-shot sprite

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET BD-02: Birthday cake frosting flourish.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE finale art output for Birthday finale visual celebration. Where it appears: finale. Subject/design: Additional small isolated icing ribbons and decorative cream dollops with clear alpha for compositing onto BD-01.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 256 pixels, 2.000:1 aspect; exact cleaned game-ready PNG target 256 x 128 pixels, 2.000:1 aspect. Name output file exactly assets/production/birthday/bd_02.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: none (decorative only); animation-state contract: single static state/one-shot sprite. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE finale art output for Birthday finale visual celebration. Where it appears: finale. Subject/design: Second independent celebratory shower variant with green/cream streaks and no white flash.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 512 pixels, 1.000:1 aspect; exact cleaned game-ready PNG target 256 x 256 pixels, 1.000:1 aspect. Name output file exactly assets/production/birthday/bd_10.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: bottom-center; collision declaration: none (decorative only); animation-state contract: single static state/one-shot sprite. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Cinnamon existing victory pose + birthday DOM text + independent Shake cup source. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Birthday art identifies Birthday sparkle burst B at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

REJECT IF: No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/birthday/bd_10.png; measure intrinsic 256x256 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BD-10 in runtime manifest. At runtime map ID to Birthday finale visual

celebration; place in finale with anchor bottom-center; use the engine auth collider "none (decorative only)" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

**PASS:** Birthday art identifies Birthday sparkle burst B at 960x540 composition scale; independent layered item with accurate mint cup/cake identity, full alpha unless marked opaque, editable text never baked.

**REJECT:** No cake, missing shamrock shakes, name spelled wrong, baked birthday message, unrelated characters, absent transparent alpha or cropped silhouette.

**INTEGRATE:** Verify file bytes exist at assets/production/birthday/bd_10.png; measure intrinsic 256x256 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID BD-10 in runtime manifest. At runtime map ID to Birthday finale visual celebration; place in finale with anchor bottom-center; use the engine auth collider "none (decorative only)" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# UIX / ADDITIONAL UI / TOUCH

14 standalone production contracts. P0 first; P1 then P2. The following text is meant to be directly supplied to LM Arena Agent Mode one card at a time, including its complete prompt.

## UX-05 / Victory UI frame

PRIORITY P0 | STATUS MISSING_GENERATION | SOURCE 1280 × 768 | TARGET 640 × 384 | RGBA

PATH: assets/production/ui/ux_05.png | ZONE: all | PIVOT: top-left | COLLIDER: none | ANIM: static, 9-slice when frame

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET UX-05: Victory UI frame.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE ui art output for Persistent interface or menu art. Where it appears: all. Subject/design: Large rich gold and navy rectangular panel with space for native HAPPY BIRTHDAY, MAVERICK! type, not baked words.

RENDER AND EXPORT CONTRACT: source artwork composition 1280 x 768 pixels, 1.667:1 aspect; exact cleaned game-ready PNG target 640 x 384 pixels, 1.667:1 aspect. Name output file exactly assets/production/ui/ux_05.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: top-left; collision declaration: none; animation-state contract: static, 9-slice when frame. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Native accessible DOM text and touch hit areas; art must never own interaction. Required priority P0 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

REJECT IF: Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/ui/ux_05.png; measure intrinsic 640x384 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UX-05 in runtime manifest. At runtime map ID to Persistent interface or menu art; place in all with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

DO NOT BAKE LIVE TEXT: all headings, counters, accessibility instructions, and birthday name are separate runtime DOM/canvas text layers with localization/layout flexibility. Allow the specified text-safe regions to remain clear.

**PASS:** Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

**REJECT:** Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

**INTEGRATE:** Verify file bytes exist at assets/production/ui/ux_05.png; measure intrinsic 640x384 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UX-05 in runtime manifest. At runtime map ID to Persistent interface or menu art; place in all with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## UX-03 / Pause window frame

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 1024 × 768 | TARGET 512 × 384 | RGBA

PATH: assets/production/ui/ux_03.png | ZONE: all | PIVOT: top-left | COLLIDER: none | ANIM: static, 9-slice when frame

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET UX-03: Pause window frame.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE ui art output for Persistent interface or menu art. Where it appears: all. Subject/design: Dark blue 9-slice panel with thin cream-gold border and simple corner detailing, no wording or buttons.

RENDER AND EXPORT CONTRACT: source artwork composition 1024 x 768 pixels, 1.333:1 aspect; exact cleaned game-ready PNG target 512 x 384 pixels, 1.333:1 aspect. Name output file exactly assets/production/ui/ux_03.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: top-left; collision declaration: none; animation-state contract: static, 9-slice when frame. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Native accessible DOM text and touch hit areas; art must never own interaction. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

REJECT IF: Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/ui/ux_03.png; measure intrinsic 512x384 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UX-03 in runtime manifest. At runtime map ID to Persistent interface or menu art; place in all with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

DO NOT BAKE LIVE TEXT: all headings, counters, accessibility instructions, and birthday name are separate runtime DOM/canvas text layers with localization/layout flexibility. Allow the specified text-safe regions to remain clear.

**PASS:** Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

**REJECT:** Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

**INTEGRATE:** Verify file bytes exist at assets/production/ui/ux_03.png; measure intrinsic 512x384 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UX-03 in runtime manifest. At runtime map ID to Persistent interface or menu art; place in all with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

ACCEPTANCE TEST: Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

REJECT IF: Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/ui/ux_09.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UX-09 in runtime manifest. At runtime map ID to Persistent interface or menu art; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

DO NOT BAKE LIVE TEXT: all headings, counters, accessibility instructions, and birthday name are separate runtime DOM/canvas text layers with localization/layout flexibility. Allow the specified text-safe regions to remain clear.

**PASS:** Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

**REJECT:** Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

**INTEGRATE:** Verify file bytes exist at assets/production/ui/ux_09.png; measure intrinsic 64x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UX-09 in runtime manifest. At runtime map ID to Persistent interface or menu art; place in all with anchor center; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

## UX-10 / Boss HP frame

PRIORITY P1 | STATUS MISSING_GENERATION | SOURCE 512 × 128 | TARGET 256 × 64 | RGBA

PATH: assets/production/ui/ux_10.png | ZONE: all | PIVOT: top-left | COLLIDER: none | ANIM: static, 9-slice when frame

LM ARENA AGENT MODE — SHAKEDOWN / GOLDEN DOME DASH — ONE INDEPENDENT ASSET UX-10: Boss HP frame.

SHAKEDOWN LEVEL 1 / BIRTHDAY EDITION. Produce one independent art asset for the mobile-first Canvas 2D side-view platformer. Canonical visual identity: supplied CINNAMON FUZZBUTT MASTER SPRITE SOURCE SHEET and supplied CINNAMON ACTIONS SHEET (attached to the PDF). Artwork is clean illustrated 16-bit/SNES-inspired pixel-art with rich controlled stepped two-tone shading, smooth 1-3 px dark outlines at the final 64px sprite scale, expressive anatomy, consistent side-on orthographic game camera, a warm stone/sage lawn palette, campus navy #22477F and cream gold #EBC666, and rich mint green #A8EFAD only for shake items. No 3D mockups, cinematic photograph, generative blur, text hallucinations, watermark, UI screenshots or unrelated subjects. Cinnamon is a red panda, NEVER a fox, cat, or raccoon; his approved round black glasses, blue headband, gray shirt, olive cargo shorts, dark paws, oversized orange/black banded tail are immutable. Do not copy the Cinnamon design onto the Fox. University of Notre Dame campus has a recognizable Main Building and Golden Dome crowned with golden Marian statue, but the layout is deliberately game-fictional for legible platforming. No Bethel University. Gameplay contrast overrides photographic campus accuracy.

OUTPUT REQUEST: generate precisely ONE ui art output for Persistent interface or menu art. Where it appears: all. Subject/design: Thin gold SNES bar border with empty central fill, maximum 3-hit boss HP, no numerals.

RENDER AND EXPORT CONTRACT: source artwork composition 512 x 128 pixels, 4.000:1 aspect; exact cleaned game-ready PNG target 256 x 64 pixels, 4.000:1 aspect. Name output file exactly assets/production/ui/ux_10.png. Deliver one individual image file, not a collage or contact sheet, plus the raw source where available. Pixel scale is a post-process target: if the generator cannot guarantee pixel-exact output, supply a high-resolution source and flag the need for deterministic resize and manual QA rather than claiming a compliant file.

CAMERA / REGISTRATION: side-on orthographic 2D gameplay item, perfectly isolated and centered inside a clear source canvas. Anchor / pivot: top-left; collision declaration: none; animation-state contract: static, 9-slice when frame. The actual game colliders are defined by code, not copied from artwork.

TRANSPARENCY: real straight-alpha RGBA, empty pixels alpha 0, no checkerboard burned in, no white halo, no drop shadow outside deliberate object design. A fixed solid matte is only a rejected-source recovery path, never described as final alpha.

REQUIRED SOURCE VISUALS: assets/references/cinnamon_master_sheet.png, assets/references/cinnamon_actions_sheet.png. Both sheet images are provided at the start of this PDF for style authority. The Fox has NO user-approved turnaround, so that reference remains a required human gate. Dependent art must copy accepted Fox features exactly and not infer approval.

INTEGRATION DEPENDENCIES: Native accessible DOM text and touch hit areas; art must never own interaction. Required priority P1 (P0=core first, P1=polish, P2=optional). Output role must remain visually legible at 64px gameplay scale, in bright campus backgrounds AND sunlit dome context, with high-contrast gameplay top edges when applicable.

ACCEPTANCE TEST: Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

REJECT IF: Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

INTEGRATION HANDOFF: Verify file bytes exist at assets/production/ui/ux_10.png; measure intrinsic 256x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UX-10 in runtime manifest. At runtime map ID to Persistent interface or menu art; place in all with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

Do not claim generated, export, alpha, dimensions, or integration verification unless actual files were produced and inspected; return the asset itself as a standalone image object, an exact output filename, any limitations, and a request for revision if needed. Never invent SHA256, atlas coordinates, or real file metadata.

DO NOT BAKE LIVE TEXT: all headings, counters, accessibility instructions, and birthday name are separate runtime DOM/canvas text layers with localization/layout flexibility. Allow the specified text-safe regions to remain clear.

**PASS:** Crisp readable icon/frame at specified dimensions; editable text remains a separate native DOM/canvas layer; touch target is coded >=44 CSS pixels.

**REJECT:** Baked spelling, tiny illegible labels, emoji fonts, click targets embedded into a PNG, visual interface replacing accessibility interactions.

**INTEGRATE:** Verify file bytes exist at assets/production/ui/ux_10.png; measure intrinsic 256x64 after normalization, alpha and crop; record SHA256 and approved visual review; register logical ID UX-10 in runtime manifest. At runtime map ID to Persistent interface or menu art; place in all with anchor top-left; use the engine auth collider "none" instead of deriving physics from pixels. Maintain functioning Canvas fallback until a browser screenshot, load trace and touch/keyboard journey show correctness. Animation states remain one file per requested state.

# ORIGINAL AUDIO / NO AUDIO DEPENDENCY

The playable source has a procedural WebAudio fallback. No externally generated tracks are claimed to exist. The audio prompts below can run after P0 visuals without blocking the birthday gift.

## AU-01 / Level loop

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • music • 18-28 s seamless

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-01 Level loop. Produce one independently named, original music asset, target duration 18-28 s seamless. Creative brief: Light brisk 130-145 BPM original collegiate-style march groove: kick/snare, pizzicato bass, playful brass-like synth motif; no copyrighted school melody or chants. Output OGG or WAV plus provenance; fallback procedural sequencer; loop seam tested. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-02 / Fox theft cue

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.45-0.8 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-02 Fox theft cue. Produce one independently named, original sfx asset, target duration 0.45-0.8 s. Creative brief: Comic ascending muted brass + sliding plucked bass, brisk and cheeky. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-03 / Jump

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.08-0.15 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-03 Jump. Produce one independently named, original sfx asset, target duration 0.08-0.15 s. Creative brief: Short springy pitched ascending pop, under 0.15 s. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-04 / Double jump

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.13-0.23 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-04 Double jump. Produce one independently named, original sfx asset, target duration 0.13-0.23 s. Creative brief: Second ascending chime over springy transient; distinguish from single jump. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-05 / Tail swish

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.10-0.20 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-05 Tail swish. Produce one independently named, original sfx asset, target duration 0.10-0.20 s. Creative brief: Compact brush whoosh with a short low pop, avoid sharp loud noise. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

### AU-06 / Pickup

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.10-0.22 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-06 Pickup. Produce one independently named, original sfx asset, target duration 0.10-0.22 s. Creative brief: Tiny two-tone sparkle, bright but not shrill. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

### AU-07 / Checkpoint

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.25-0.55 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-07 Checkpoint. Produce one independently named, original sfx asset, target duration 0.25-0.55 s. Creative brief: Gentle resolved major triad arcade chime. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

### AU-08 / GO pulse

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.28-0.55 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-08 GO pulse. Produce one independently named, original sfx asset, target duration 0.28-0.55 s. Creative brief: Two percussive drum hits and short cheerful brass swell; a visual substitute exists. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

### AU-09 / IRISH reset

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.18-0.36 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-09 IRISH reset. Produce one independently named, original sfx asset, target duration 0.18-0.36 s. Creative brief: Downward paired drum rim taps, softer than GO. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-10 / Cannon tell

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.20-0.45 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-10 Cannon tell. Produce one independently named, original sfx asset, target duration 0.20-0.45 s. Creative brief: Two warning clicks with small rattling paper shuffle. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-11 / Cannon fire

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.15-0.35 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-11 Cannon fire. Produce one independently named, original sfx asset, target duration 0.15-0.35 s. Creative brief: Soft party pop and fluttering paper whoosh; restrained loudness. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-12 / Damage

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.12-0.27 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-12 Damage. Produce one independently named, original sfx asset, target duration 0.12-0.27 s. Creative brief: Soft but clear dissonant bump; never piercing. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-13 / Fox escapes

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.55-1.0 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-13 Fox escapes. Produce one independently named, original sfx asset, target duration 0.55-1.0 s. Creative brief: Comic descending trombone-like slide or pluck, no speech required. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-14 / Level clear

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 1.8-3.2 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-14 Level clear. Produce one independently named, original sfx asset, target duration 1.8-3.2 s. Creative brief: Original triumphant brass/chiptune cadence with playful final wrong-note chuckle. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-15 / Dome ascent music

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • music • 24-36 s seamless

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-15 Dome ascent music. Produce one independently named, original music asset, target duration 24-36 s seamless. Creative brief: Bright golden afternoon ascent: original 134 BPM handbells, airy synth-strings, plucked upright bass and syncopated side-snare. No copyrighted Notre Dame melody; calm enough to preserve rhythmic telegraphs. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-16 / Fox three-phase boss music

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • music • 20-32 s seamless

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-16 Fox three-phase boss music. Produce one independently named, original music asset, target duration 20-32 s seamless. Creative brief: Comically dramatic agile 148 BPM rhythm with staccato plucked strings and mischievous muted brass; keep a clean short bar boundary for loops and clear hit/cue frequency spectrum. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-17 / Birthday victory fanfare

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx/music • 6-11 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-17 Birthday victory fanfare. Produce one independently named, original sfx/music asset, target duration 6-11 s. Creative brief: Original celebratory short brass fanfare with soft glockenspiel ending, layered final note giving space to spoken or visible HAPPY BIRTHDAY, MAVERICK; no copyrighted melodies. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-18 / Fox boss charge tell

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.4-0.75 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-18 Fox boss charge tell. Produce one independently named, original sfx asset, target duration 0.4-0.75 s. Creative brief: Short descending percussion warning with an obvious rising hiss ending; clean distinct from launch; volume safe and duplicated visually. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-19 / Fox boss stagger vulnerable

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.35-0.7 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-19 Fox boss stagger vulnerable. Produce one independently named, original sfx asset, target duration 0.35-0.7 s. Creative brief: Comedic descending trombone/plucked bass note signaling punish window,

very distinct from damage hit tone. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-20 / Final cake reveal

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 1.2-2.1 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-20 Final cake reveal. Produce one independently named, original sfx asset, target duration 1.2-2.1 s. Creative brief: Tiny ascending sparkling bell flourish and soft cake pop, not a jump scare or copyrighted tune. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

## AU-21 / Boss confetti shot

MISSING_FINAL_RECORDED_FILE__RUNTIME_SYNTH_FALLBACK • sfx • 0.12-0.35 s

LM ARENA AUDIO GENERATION — SHAKEDOWN BIRTHDAY EDITION — AU-21 Boss confetti shot. Produce one independently named, original sfx asset, target duration 0.12-0.35 s. Creative brief: Papery mechanical pop, small mid-frequency percussive click and soft fizz; no loud gunshot or shrill peak. Project is a 2D birthday platformer on a fictionalized Notre Dame quad and Golden Dome, Fox boss, cake and Shamrock Shakes. Deliver a single WAV 48kHz stereo source and an OGG/Opus or OGG/Vorbis browser-ready derivative at clean -16 LUFS integrated loudness when applicable (short cues evaluated by peak/ear). No external copyrighted melody, school song, third-party vocals, or license-ambiguous recording. Include creation attribution, license and loop point metadata; verify loop seam and listen end-to-end. Gameplay must still work muted, offline and when the browser disallows autoplay. Do not claim rendered files or loop verification unless they physically exist.

# FINAL LM ARENA / ACCEPTANCE CONTRACT

Create only the individual art/audio described by each asset record; use exact IDs, filenames, target pixel dimensions and source references. Accept the 26 currently existing verified Cinnamon frames as locked output, not generation requests.

Do NOT generate a full atlas or contact sheet as a substitute for many separately requested art files. The deliberate Fox turnaround is the ONLY multi-view sheet format explicitly requested.

Keep the Fox from stealing Cinnamon identity; Fox can be provisional for a runnable placeholder but no canon sign-off is implied. Approve a coherent turnaround before full Fox animation batch.

Production status vocabulary: MISSING_GENERATION / GENERATED_QUARANTINED / NORMALIZED_VERIFIED / INTEGRATED_BROWSER_CHECKED / APPROVED. Use VERIFIED_IN_REPO_LOCAL_BROWSER only for the original 26 source-derived Cinnamon frames.

Verify every file after generation: bytes, exact dimensions, real alpha, image identity, expected pivot, source provenance, asset dependency, hash; re-open game, inspect screenshot and exercise character interaction before integration approval.

For paired frames, share exact center and bottom line. For tile images, align seamless edges and collision top. Background must not paint playable foreground details that compete with hitboxes.

Never silently delete/fork working gameplay systems to make art easier. Preserve the authored 2D Canvas runtime, keyboard and mobile touch inputs, checkpoint/retry, boss logic and the exact birthday ending.

The production packet is complete only as specification. The game itself remains playable with documented Canvas fallbacks while new LM Arena art awaits actual generation.

## FULLY READABLE EDITABLE SOURCE + JSON MANIFEST

The accompanying ShakeDown_Complete_LM_Arena_Master.md is the editable authoritative text source for this PDF, and ShakeDown_Complete_Asset_Contract.json is the machine-readable field-complete production register. Use these together; never hand-edit the PDF without regenerating from source.
